

OPTION.VALVES

The most basic of inflation options, like filling a car or bicycle tyre. Two valves are included, one for each bellow, as well as a mounting bracket.

Benefits:

Individual inflation & deflation of each bellow respectively.

MARCLE LEISURE DUAL TAP SINGLE GAUGE

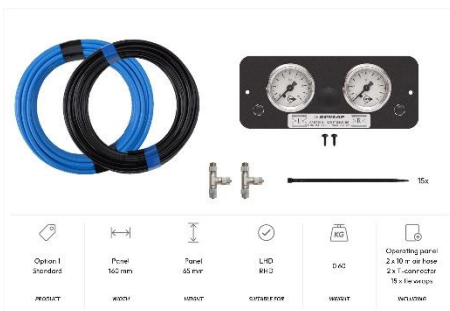

The Dual Tap Gauge allows for the pressure reading from both bellows individually via the taps onto a single gauge for minimal space and comes in 3 different mounting variations. It also has a single Schrader valve for inflation for both or each bellow individually.

Benefits:

Individual Bellow inflation & deflation

Gauge to monitor pressure

Compact inflation option

OPTION.1

This is a Dual Gauge Panel that can be mounted in your dashboard if there is a dashboard specific plate available for your vehicle or you can choose the universal plate which can be mounted where you like. This allows for simultaneous pressure readings from both bellows as well as providing a Schrader inflation valve for each bellow for individual inflation and deflation.

Benefits:

Individual bellow inflation & deflation

Gauges to monitor both bellow pressures simultaneously

Compact inflation option

Most vehicle make dashboard style gauge plates available

OPTION.2

The first of the two on board inflation options. This comes with a mountable compressor kit that can be initiated via the flick of a switch on the dual gauge panel inflating both bellows simultaneously. Each bellow can then be deflated individually to a pressure that suits. This allows for a more comfortable experience as you have access to inflation and deflation from the comfort of your cab without having to remember to bring a portable air compressor or stop at a garage to fill up/top up.

Benefits:

Dual bellow inflation

Individual bellow deflation

Gauges to monitor both bellow pressures simultaneously

On board so no need for external compressors

Most vehicle make dashboard style gauge plates available

Can be operated from the comfort of the cab

Useful for people with varying loads

OPTION.3

This is like for like with OPTION.2 on board compressor option but with the included benefit of an air tank giving instant access to pressurised air which can be used to inflate the bellows at the touch of a button. The other benefit is that you can inflate each bellow individually rather than at the same time as with OPTION.2. You also won't have to wait for the compressor to build up pressure, as you have instant access to it via the air tank. The compressor will automatically turn on when the pressure in the tank drops to fill it up again, this our most premium option.

Benefits:

As with OPTION.2 except:

Individual bellow inflation & deflation

You do not have to wait for the compressor to build up pressure, having instant pressurised air
