#Onlyfans #sexy #thicc #findom #onlyfan #puffpuffpass #gay #lesbian Hey guys! This is my first grow and I'll be growing Northern Light Auto using CFLs. I planted the germinated seed four days ago. Right now it's in a large of FF Happy Frog soil, and under one 55 watt CFL, which gives off 3,600 Lumens. I have two other 55 watt bulbs too, but I'm not using them... #headyglass #glassofig #glass #glassart #glassforsale #heady #bestofglass #glassporn #dabs #cannabiscommunity #thousanddollarsmoke #boro #headyglassforsale #headyart #society #glassblowing #dabbersdaily #glasslife #functionalglassart #headyglassofig #community #cannabis #terps #dabstagram #art #smokeshop #hightimes [my sources](#)

WHAT IS THAT?

SINSEMILLA

Roughly translated from Spanish Sinsemilla means, “sin, seeds”.

Sinsemilla is the word to describe a female cannabis flower that has not been pollinated.

A Sinsemilla cannabis crop is a crop of cannabis that has no males to pollinate the females.

When Sinsemilla ben

A SINSEMILLA CROP IS THE ONLY WAY TO PRODUCE QUALITY CANNABIS WITH HIGH RECREATIVE VALUE.

Why do we cause a Sinsemilla flower to be produced?

FEMALE CANNABIS PLANTS FLOWERS PRODUCE HIGHLY POTENT RECREATIONAL, AND MEDICINAL CHEMICALS WE LOVE. TO PRODUCE POLLEN THAT FERTILIZES THE FEMALE PLANT. ONCE FERTILIZED IT NO LONGER PRODUCES CANNABINOIDS, ONLY PRODUCING SEEDS. ONCE SEEDS ARE PRODUCED THE PLANT IS NO LONGER PRODUCING. BY KEEPING OUR PLANTS ALL FEMALE, THEY REMAIN FEMALE. THIS MEANS THE PLANT CONTINUES TO PRODUCE THE CANNABIS WE WANT.
