Winstrol is most commonly dosed at 50 mg/day and occasionally used as high as 100 mg/day. I only used 100 mg/day of it the last 2 weeks before a competition once, but used 50 mg/day the first 4 weeks of it. I've found that steroid cycles with Winstrol need to be no longer than 6-8 weeks because it can wreak havoc on your cholesterol levels. At a rate of 50 mg per day, an athlete will need 350 mg total mg per week. When injecting the user should not exceed 50 mg to the site of injection. There are many steroids with which this is perfectly fine to do, but with Winstrol this will hurt like hell because 50 mg hurts enough. #doctors #doctor #medicine #medical #covid #health #healthcare #hospital #coronavirus #thessaloniki #medico #doctorsofinstagram #stayhome #medicalscool #love #corona #medlife #picoftheday #greece #skg #staysafe #covid\_19

I've always been a very intense person. Its probably my fatal flaw. I need to always be doing something to improve, keep going and to be better. If anything is done half way, it wasn't done right...
