

# VOLT-0002 & VOLT-0003 Installation Instructions

## 36/48 Volt to 12 Volt 25 or 10 Amp

Locate an open area of the golf car chassis for installation that allows easy access and good ventilation. Clean area well. Position the Reducer and mark the mounting holes. Drill holes and bolt the reducer into place.

1. The black and red wire pair: This is the input side of the reducer. Connect these wires to the 36 or 48 Volt DC side of the golf cart. Black is negative and Red is positive.
2. The black and blue wire pair: This is the output 12 Volt DC side of the reducer. Connect the black wire to the negative side of all electrical components installed and the blue wire to the positive side of all electrical components installed or to the optional Fuse Block, ACC-0034.

Ensure that connections are tight and clean. Do not exceed 25 Amps operating current on VOLT-0002 and 10 Amps operating current on VOLT-0003.
