SEWA INTERNATIONAL’S
SHE - SANITATION, HYGIENE & EMPOWERMENT PROJECT FOR THE GIRL CHILD

WWW.SHE.SEWAUSA.ORG

Manipur & Tripura
SANITATION STATUS

As per the survey in Manipur, 53 percent of schools do not have drinking water supply, 70 percent of adolescent girls discontinue their education, 40 percent of schools do not have sanitation facilities (girls and female teaching staff suffer the most).

Key Observations:

- Most of the students come from humble agricultural background families.
- Students walk 1-2kms every day to reach school.
- They get water supply for one hour every day and they do not have any water storage facility.
- The average number of toilets in government schools is two. In many schools, students and teaching staff share the same toilet.
SHE team conducted surveys and identified schools in Manipur. In each of the identified schools, new toilets will be installed with provision of water connections and overhead tanks for drinking and sanitation.

SANITATION STATUS

Over the last few years, there has been a sharp decline in enrolment of students in government schools due to poor infrastructure and lack of other facilities.

Some of the schools selected by the Sewa team are located in deep forest regions. The tribal community often vandalise school property as they are against social development. Sewa team is working towards social and economic development of these regions.

Key Observations:
- Most of the students come from neighbouring tribal communities
- Students walk 1-1.5 km every day to school
- Lack of clean drinking water facility and lack of water for sanitation
- Most of the toilets are non-functional or in need of repairs.
SHE team conducted surveys and identified schools in Tripura. In each of the identified schools, 4 new toilets will be installed along with provision of water connections and overhead tanks for drinking and sanitation.
