- Deoxyribonucleic acid (**DNA**) contains instructions to make proteins.
- DNA is stored in the nucleus in thread-like structures called **chromosomes** with 2 identical **chromatids**.
- Each chromatid is composed of DNA wound around proteins called **histones** which provide support.
- **Nucleosomes** consist of 147 bases wrapped around 8 histones, arranged like '*beads on a string*'.
- The building blocks of DNA are **nucleotides** with 4 different bases: *adenine (A), thymine (T), cytosine (C)* and *guanine (G)*.
- Nucleotides are joined together to create 2 strands twisted around each other to form the DNA **double helix**.
