

MULTI-USE DECON SPRAYER FOR ON-SCENE AND GEAR DECONTAMINATION

1

AT THE SCENE GROSS DECON OF PPE ON-SITE

Gross Decontamination of Personal Protective Equipment (PPE) in the field has shown to reduce contamination by 85%*. When used with a fire hose adapter (DECON-REDUCER), the Gear Decon Sprayer can be directly connected to a fire or pumper truck for effective on-scene washing of PPE. The sprayer automatically mixes water and gear-cleaning solutions/disinfectants to stop cross transfer of carcinogens from PPE to the skin and gear off-gassing.

2

AT THE SCENE POST INCIDENT SITE CLEAN-UP

The Ram Air Gear Decon Sprayer can be used for easy decontamination of the sidewalk or street following an incident. A simple connection of the sprayer to fire or pumper truck fire hose with a Ram Air fire hose adapter (DECON-REDUCER) makes spray-down of the scene quick and easy—helping to reduce the risk of cross contamination and restoring safety to the area.

3

AT THE STATION SPECIAL-OPS GEAR DECONTAMINATION

The Ram Air Gear Decon Sprayer properly cleans/disinfects hazmat, immersion and ice-rescue suits that cannot be washed in a mechanical washer. The sprayer operates with water pressure of up to 100psi, so it can easily be connected to a standard 3/4" garden hose. The sprayer allows for spraying in any direction—even upside-down—so hard-to-reach areas of the gear are properly cleaned. Use with the Ram Air Rinse Station & Staging Accessory (RS-B/RS-BSTK) to hold gear in an upright position for easily rinsing/decontaminating.

Designed with air injection at the nozzle, the sprayer automatically mixes water and gear-cleaning solutions/disinfectants (sold separately) with air to achieve a foaming action. The foam provides better adhesion to the garment.

A fire hose adapter enables the sprayer to be directly connected to a fire or pumper truck.

A dual-jug model is available for departments that prefer a jug for cleaning solutions and a jug for disinfectants on the same unit.
