

RETRACTA-CADE

by Visiontron Corp.

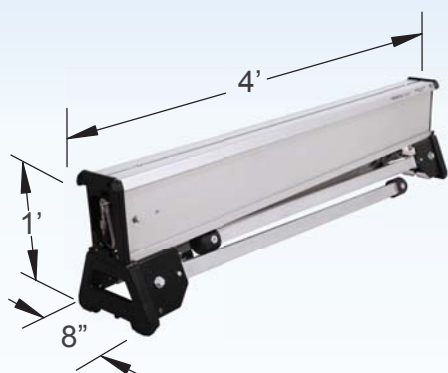

Fire-End & Croker Corp. - 7 Westchester Plaza - Elmsford, NY 10523 - 800-759-3473

Crowd Control Where & When You Need It

Developed by a Retired
NYPD Lieutenant

Made in U.S.A

- ▶ **Immediate Security:** 10' barrier deploys in 30 seconds
- ▶ **Retracts Easily:** for compact storage and transportation
- ▶ **Heavy-Duty 37 lbs. Barrier:** yet still light enough to carry
- ▶ **Reduce Costs:** saves on labor, warehousing & transportation

Retracta-Cade Features

Safety On Demand: The fully retractable, portable barricade system

Rust-proof anodized aluminum and impact-resistant plastics: designed to withstand heavy use and the outdoor elements.

Heavy-Duty but transportable: at 37 lbs. it's light enough for one person to carry, but substantial enough for a safe, controlled barrier system

Extremely durable HDPE extensions: pull out in seconds with the attached carabiner. Grooved stripes won't wear or fade over time.

Optional silk-screen printing: on the unit face for a permanent message

Legs deploy easily: with a simple hand lever and lock into place

Adjustable length: from 4' - 10'

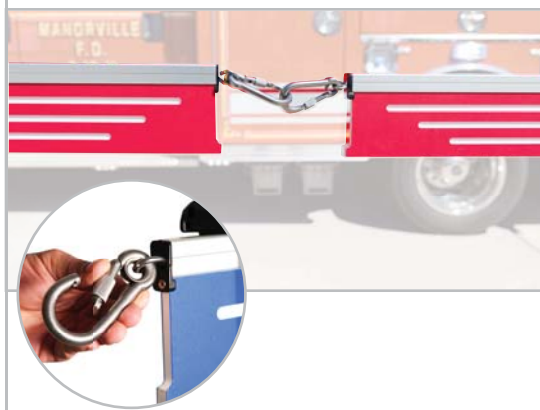

Stackable and Storable

Store large quantities efficiently: at fire houses, police stations, etc. for immediate access. 250' of barriers store in a 4' x 4' x 5' area in optional Reusable Storage Pallet (shown).

Lockable Connection

Threaded carabiner: locks to secure the connection between barriers, and rotates 180° to create endless barrier configurations.

Folds Less than Half its Size

Retracts to 4' x 1' x 8" in seconds: several can fit into the trunk of a patrol car. Folded legs automatically lock and serve as a carrying handle.

Retracta-Cade Options

Configure your Retracta-Cade's Design to Meet General or Specific Applications:

Retracta-Cade Sign Inserts

Printed sign panels allow the Retracta-Cade to be used for multiple applications. Up to three sign inserts slide and lock into each track, to store six signs in one unit.

Signs are single-sided and digitally rear-printed on PETG with white vinyl backing to protect the message. Choose from the messages shown or any custom printing.

Stock:

Non-Stock:

Custom:

Retracta-Cade Light Kits

Kit includes six rechargeable LED lights, six magnetic adapters, wall charger, car charger, and hard carrying case

Attention-grabbing LED lights slide into the top of the Retracta-Cade for increased visibility in day or night.

Features:

- ▶ Red, yellow or blue lights available
- ▶ Hard carrying case conveniently charges and stores six LED lights.
- ▶ Each light includes nine patterns (flashing, steady-on, rotating, etc.)
- ▶ Lights are waterproof and impact-resistant
- ▶ Lights can be removed from magnetic Retracta-Cade adapters and used for other applications like road 'flares'

Three Standard Extension Colors

Yellow with Black Stripes

Blue with White Stripes

Red with White Stripes

Other Options

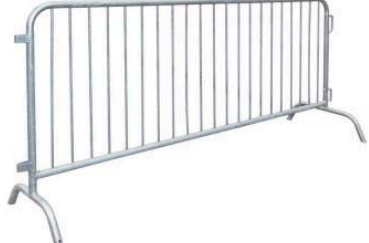

Reflective Decals: 1/2" stripes provide increased visibility

Property ID Tagging: Text beneath the unit indicates ownership

The Retractable-Cade Difference: A Comparison to Common Barriers

- ▶ Rust-proof anodized aluminum and impact-resistant plastics ensure the Retractable-Cade will withstand tough wear and tear. Wood barriers pit and deteriorate, 'French' barriers have stress points that snap and require welding.
- ▶ Compact storage design requires fewer employees to deliver barriers to and from event locations. Metal and wood barriers have a larger storage footprint, causing costly warehouse rental and transportation expenses.
- ▶ Quick and easy setup and breakdown reduces overtime at large scale events such as parades.
- ▶ Tamper-proof carabiners easily connect to each other. Wood barriers have no connection points and 'French' barrier hooks are cumbersome and therefore often not connected at all.
- ▶ Fewer resources dedicated to coordinating delivery, set up and return of barricades means personnel can focus on other important tasks.
- ▶ Easily relocatable for on-demand deployment, no dedicated barrier trucks or certified drivers necessary to transport. Other barriers require pre-scheduled delivery and cumbersome, expensive transport.

| | Retractable-Cade | Wood Saw Horses | 'French' Barriers |
|-----------------|---|--|---|
| |  |  |  |
| Size in Storage | 48"L x 8"D x 12"H | 168"L x 34"D x 40"H* | 79"L x 26.25"D x 43"H* |
| Deployed Size | 120"L x 32"D x 41"H | 168"L x 34"D x 40"H* | 79"L x 26.25"D x 43"H* |
| Weight | 37 lbs. | 55 lbs.* | 44 lbs.* |

What do your barriers *really* cost?

A closer look at some of the hidden costs of wood saw horses and 'French' barriers

| | | | |
|-----------------------|--|---|---|
| Warehousing | Minimal storage footprint. Unit retracts so 16 can store in a 4' x 4' x 4' space | High cost. Bulky 3 piece units require large, dedicated storage areas for 14' beams which do not retract | High cost. Do not collapse at all to save space |
| Maintenance | Minimal cost. Replacement parts for all components, maintenance contract available | Constant maintenance and repair due to wood splitting & cracking, repainting, and replacing legs every 6 months | Constant welding from snapping stress points |
| Transportation | Easily transportable. A car trunk for everyday use, cargo vans for large events | Expensive and cumbersome. Specialized trucks/certified drivers dedicated to transporting barriers | Expensive and cumbersome. Specialized trucks/certified drivers dedicated to transporting barriers |
| Setup/breakdown labor | One person in less than 30 seconds | Time-consuming. Often requires overtime labor | Time-consuming. Often requires overtime labor |
