

# Lego 42115

*Lamborghini Sián FKP 37*

*Installation Guide*

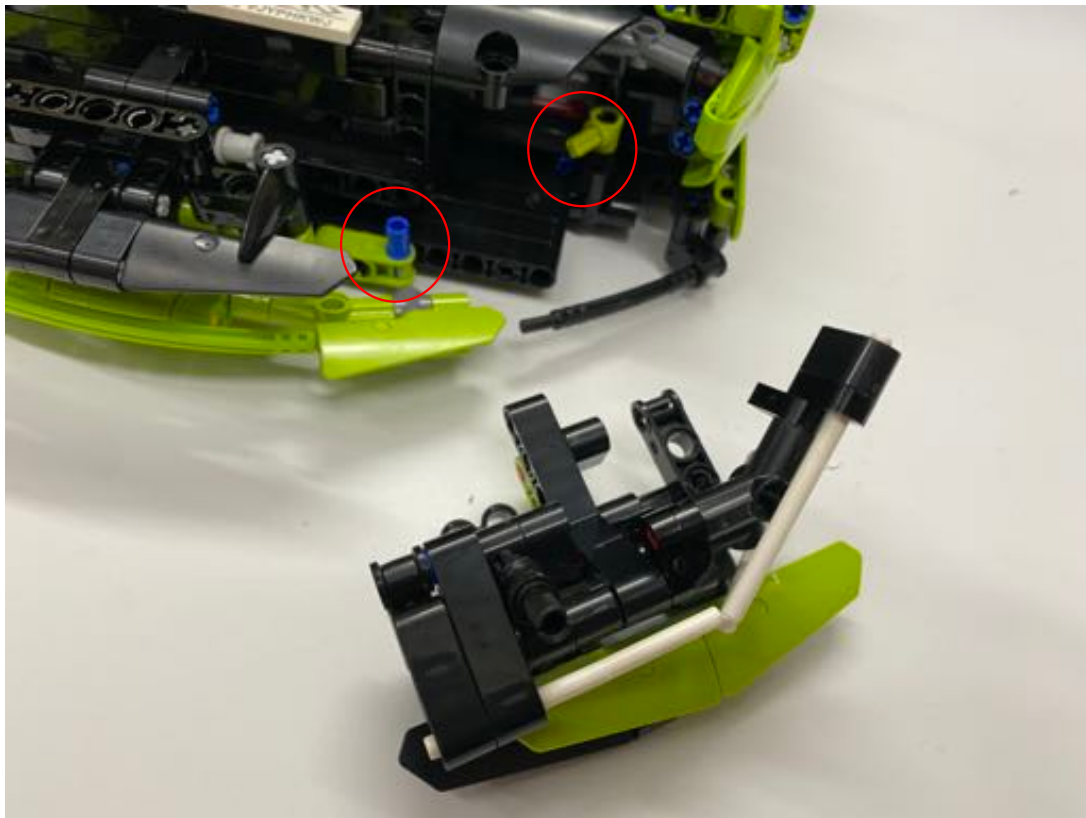

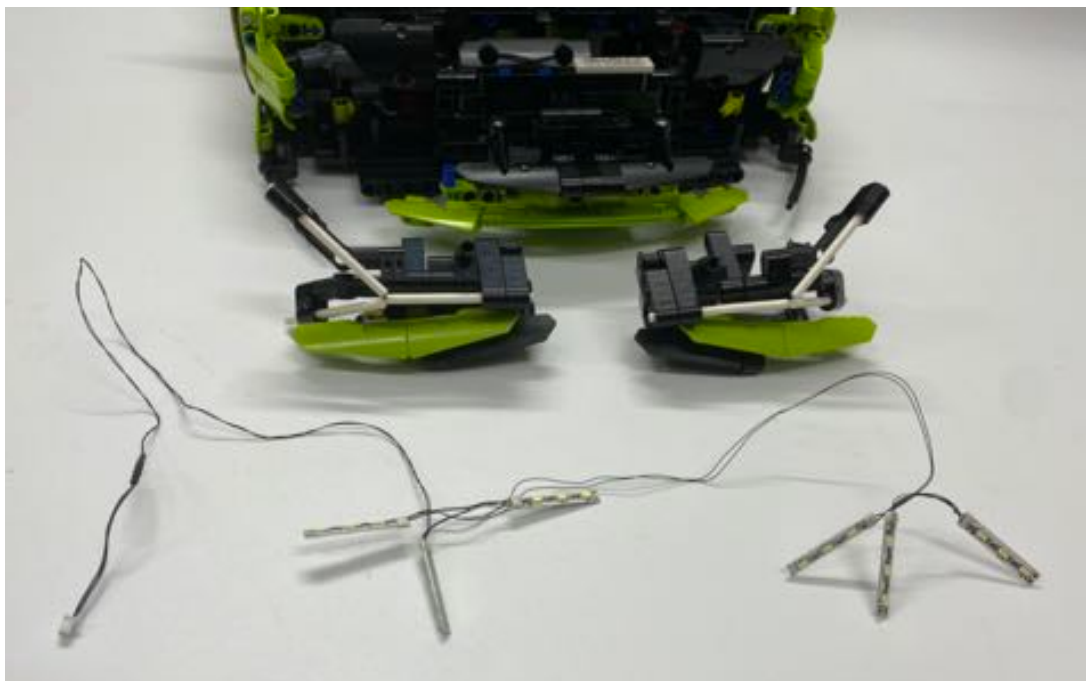

Before installing the lights, remove the two headlights from the vehicle

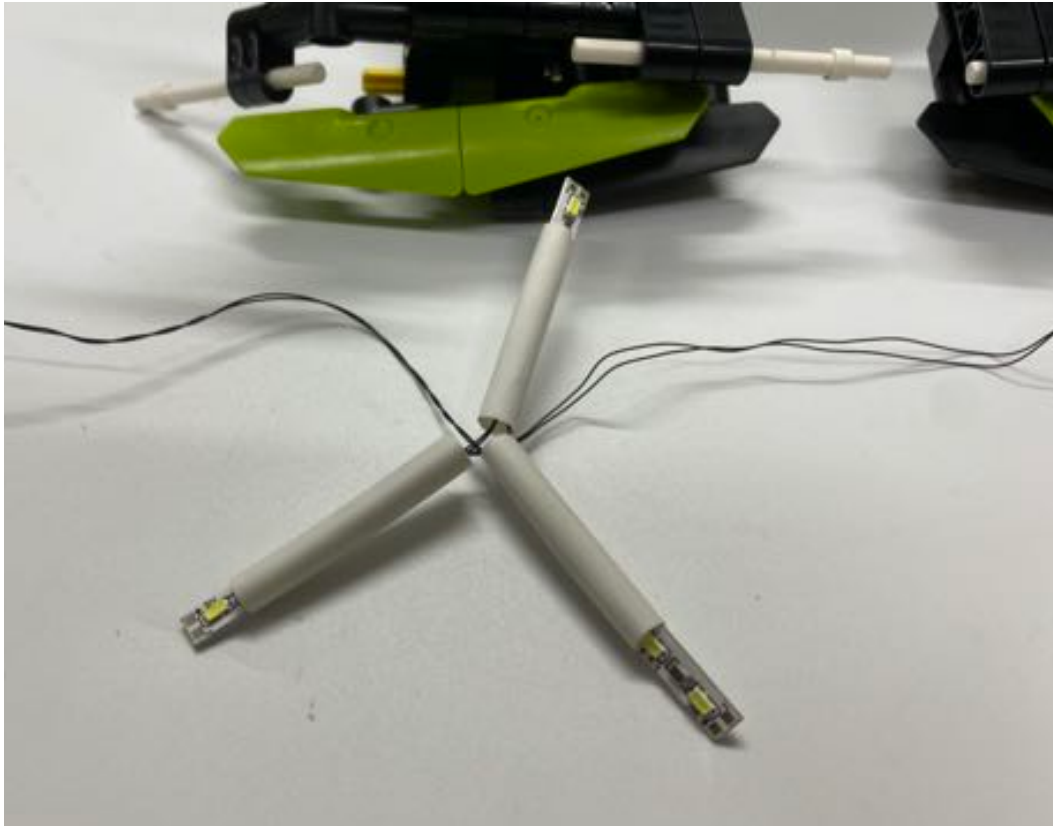

They can be removed by detaching the part in red circles

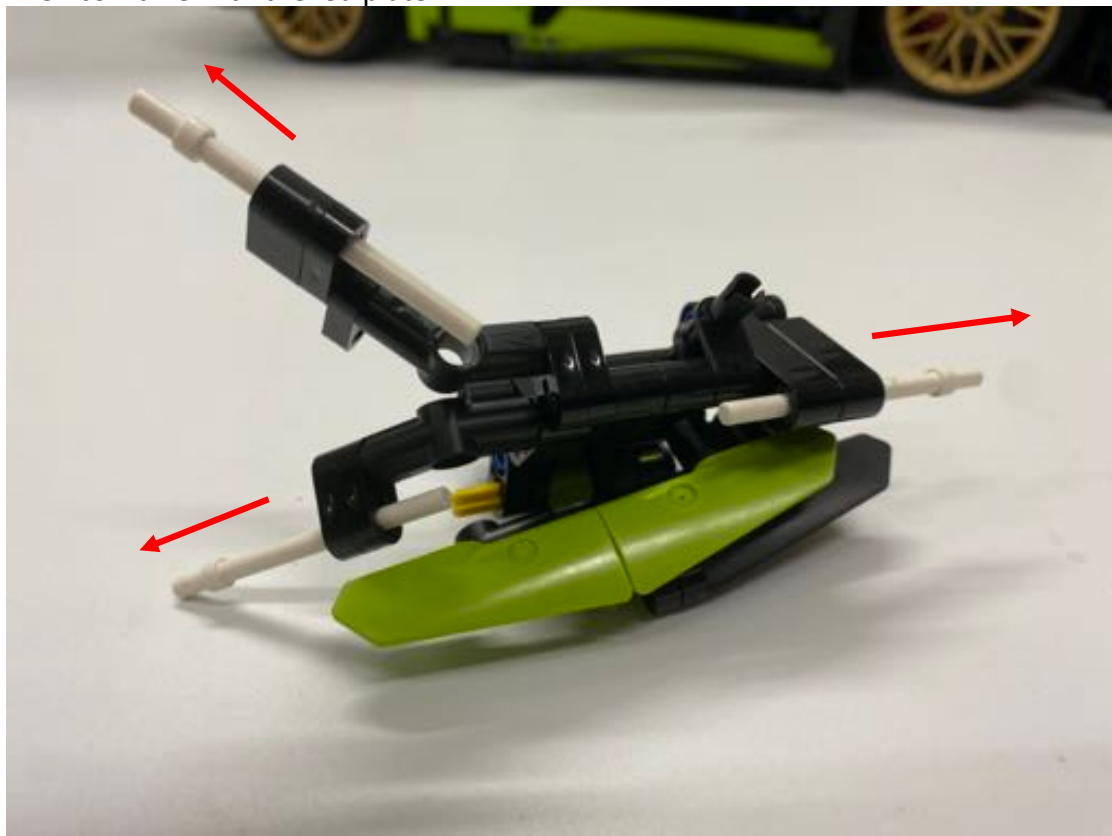

Prepare the following lighting parts

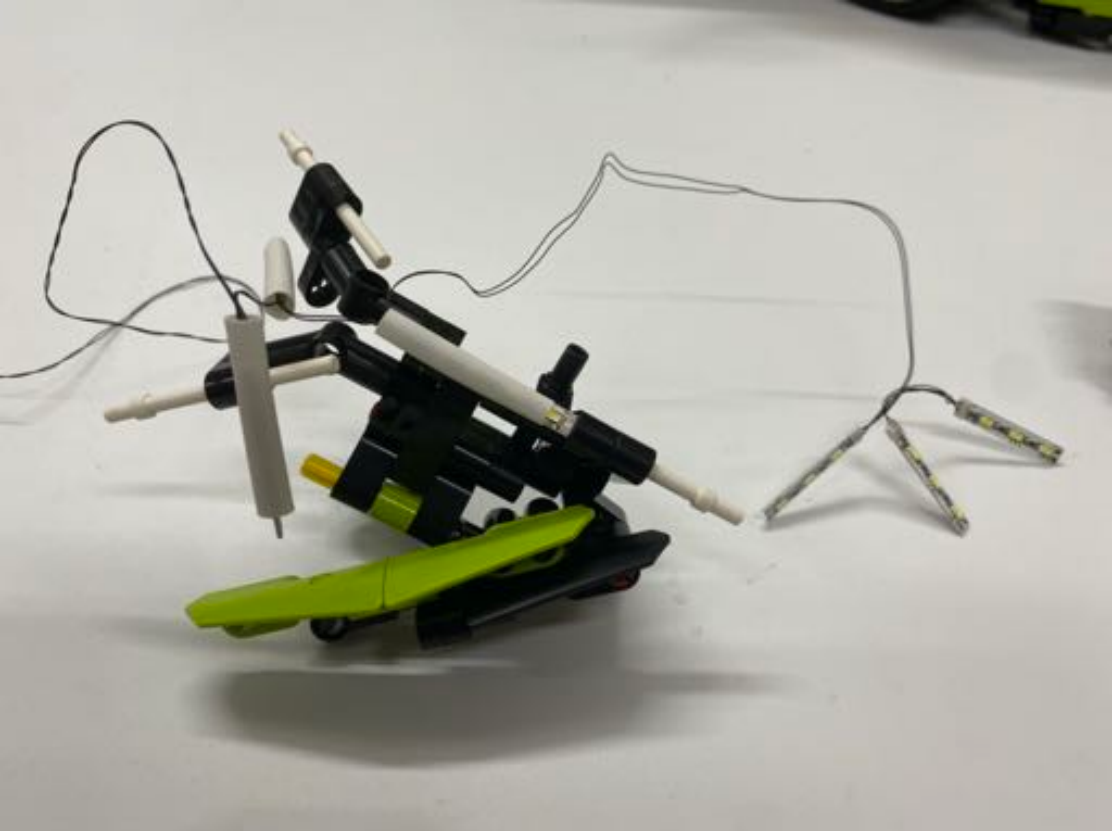

Put the white tubes in to cover lighting bars as shown

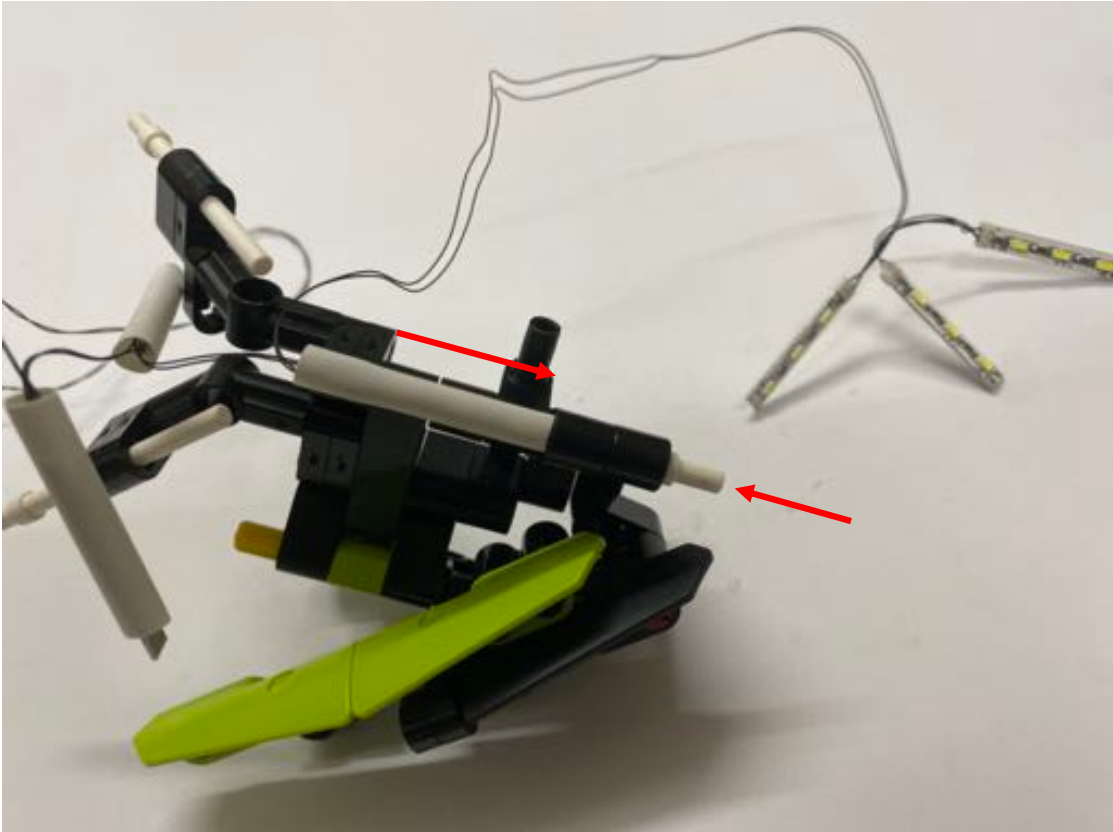

To install the leds on headlights, start by pulling the bar off a bit as shown  
Then combine with the led plate

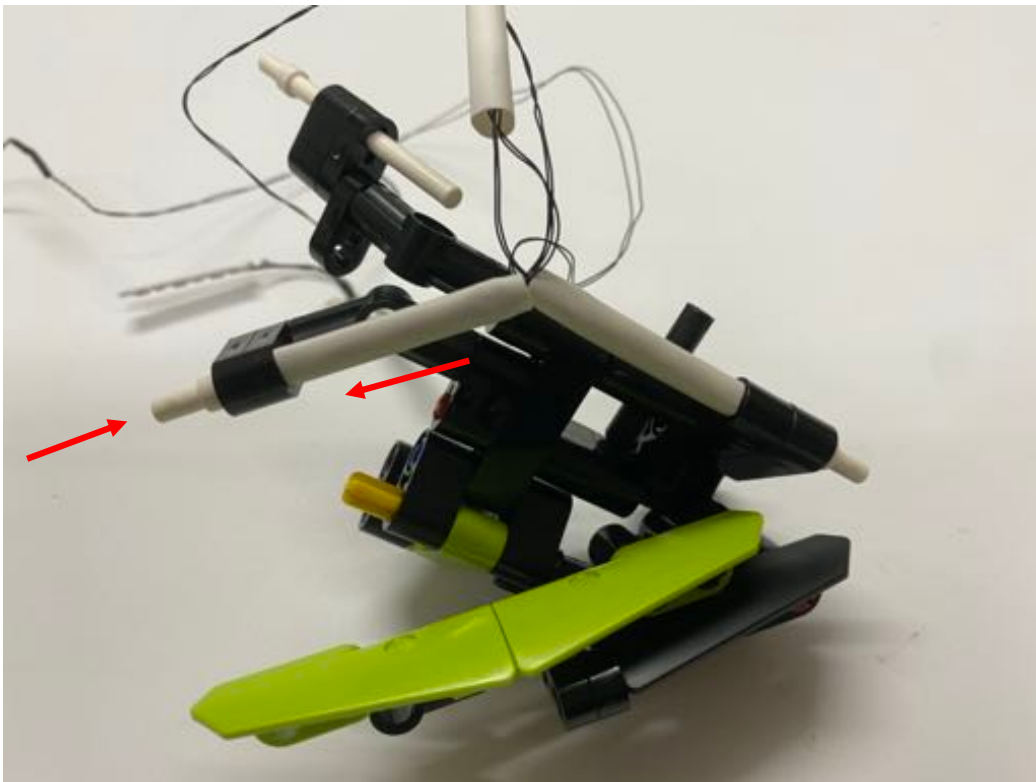

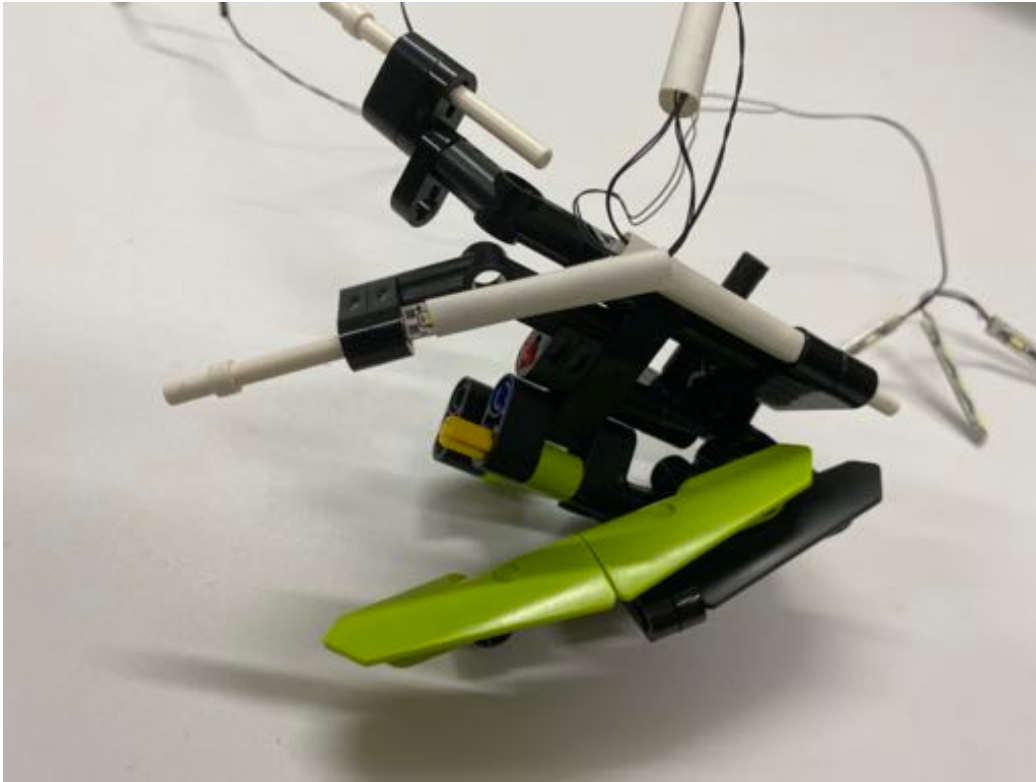

Install one of them first

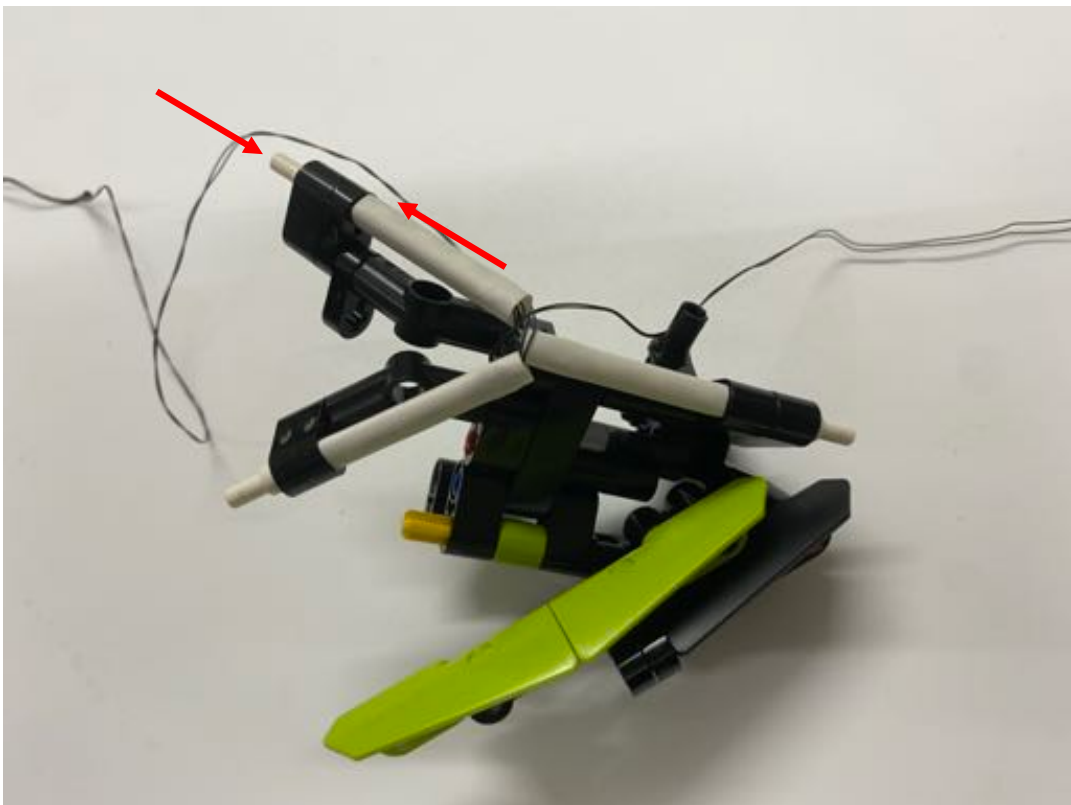

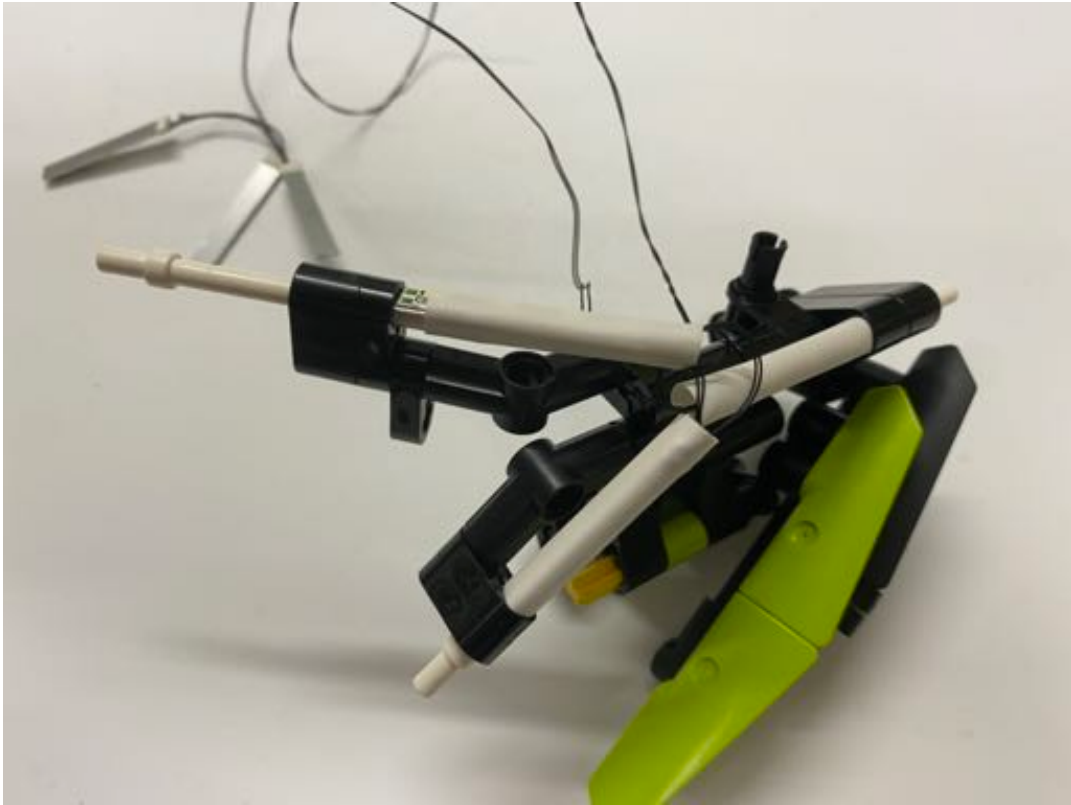

Then store the bar and push the tube to totally cover the lights

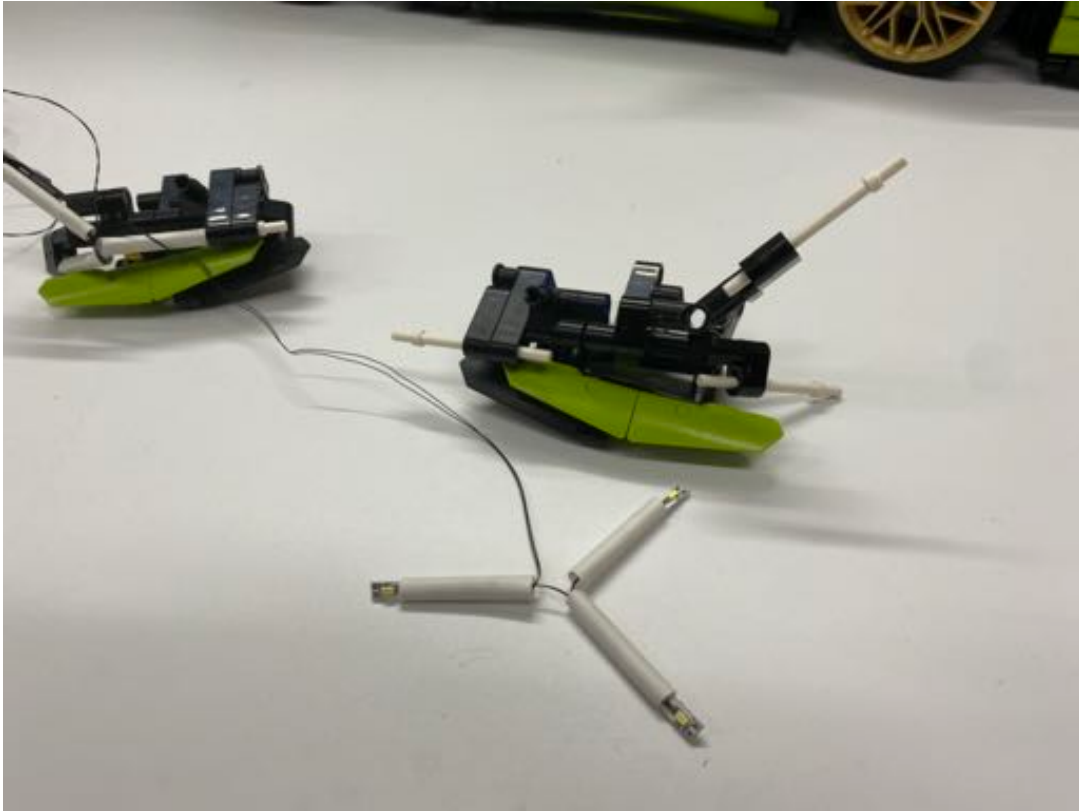

Then another light

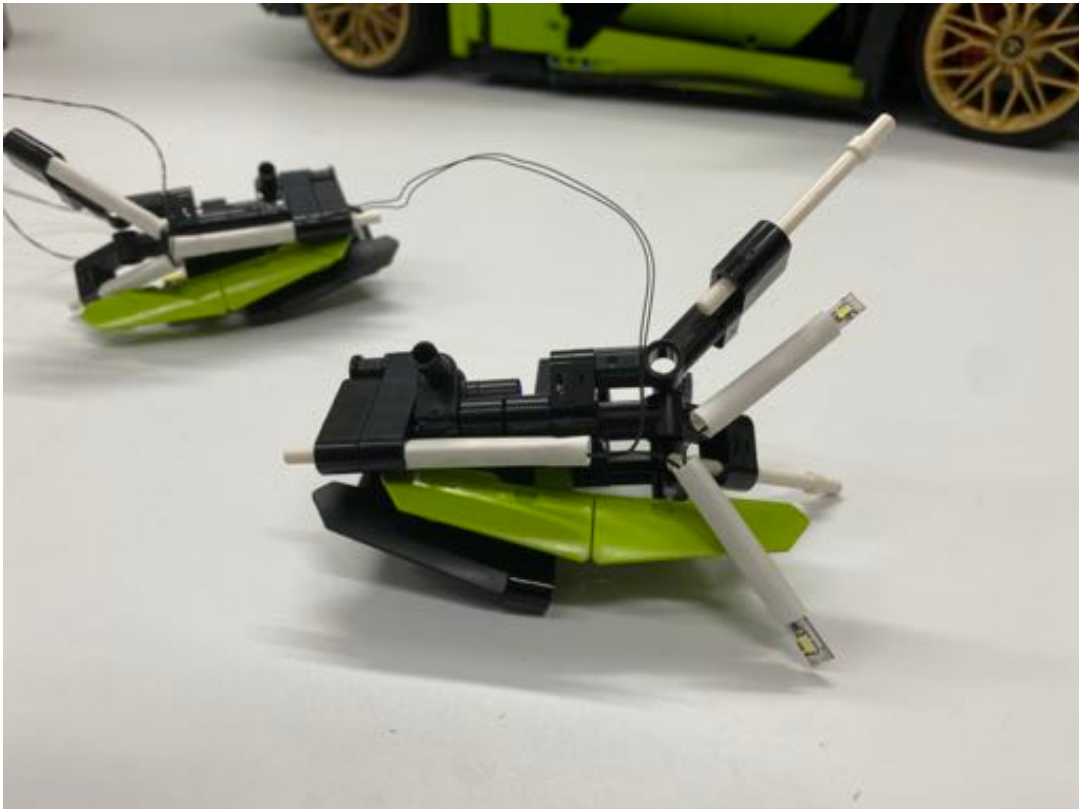

Then another light

Then install the lights for other side

Do the same steps as before

Now the headlights are installed

Then restore the headlight

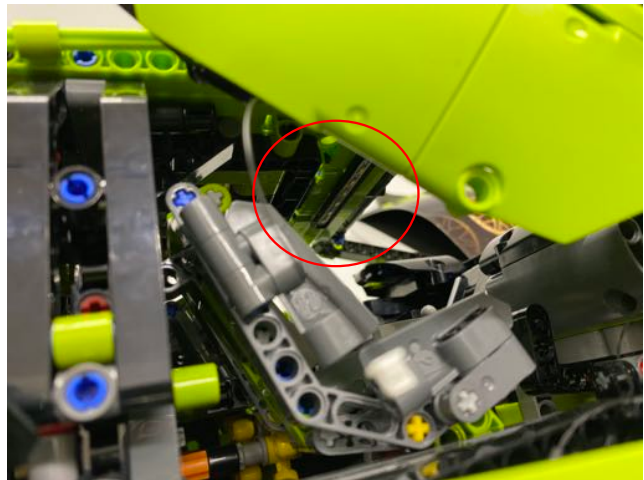

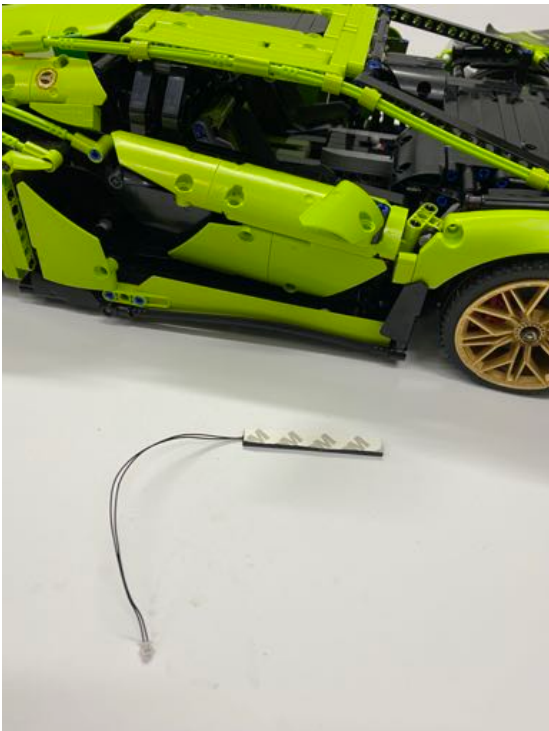

Guide the connector to the hole to middle of car

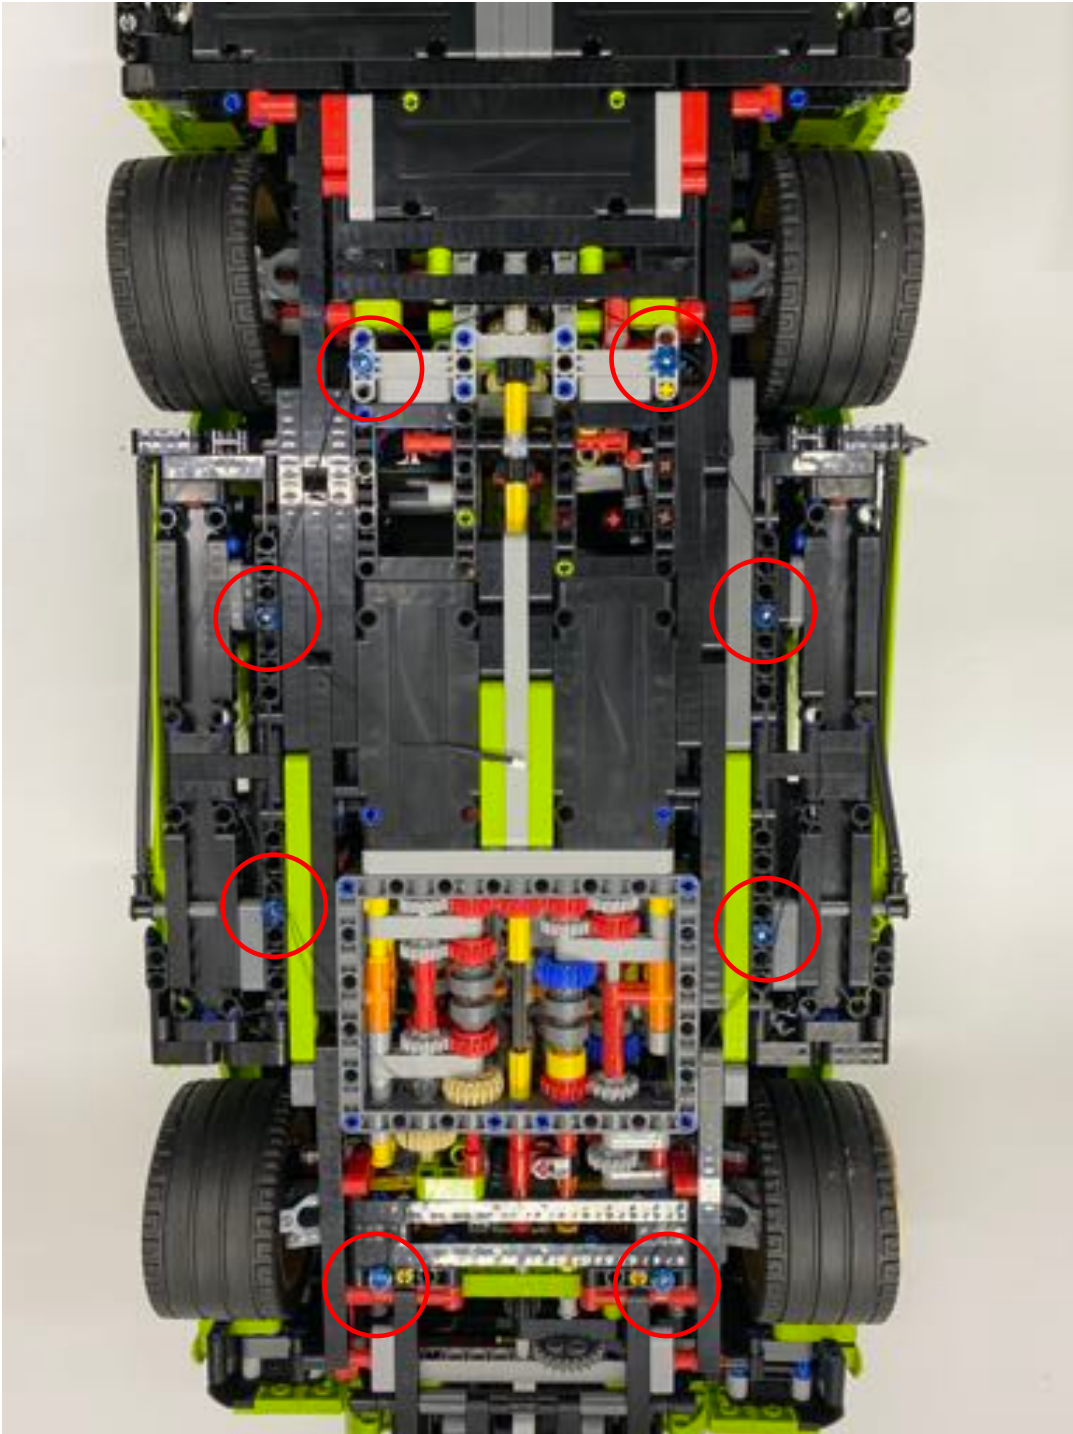

Then leave it beside the seat

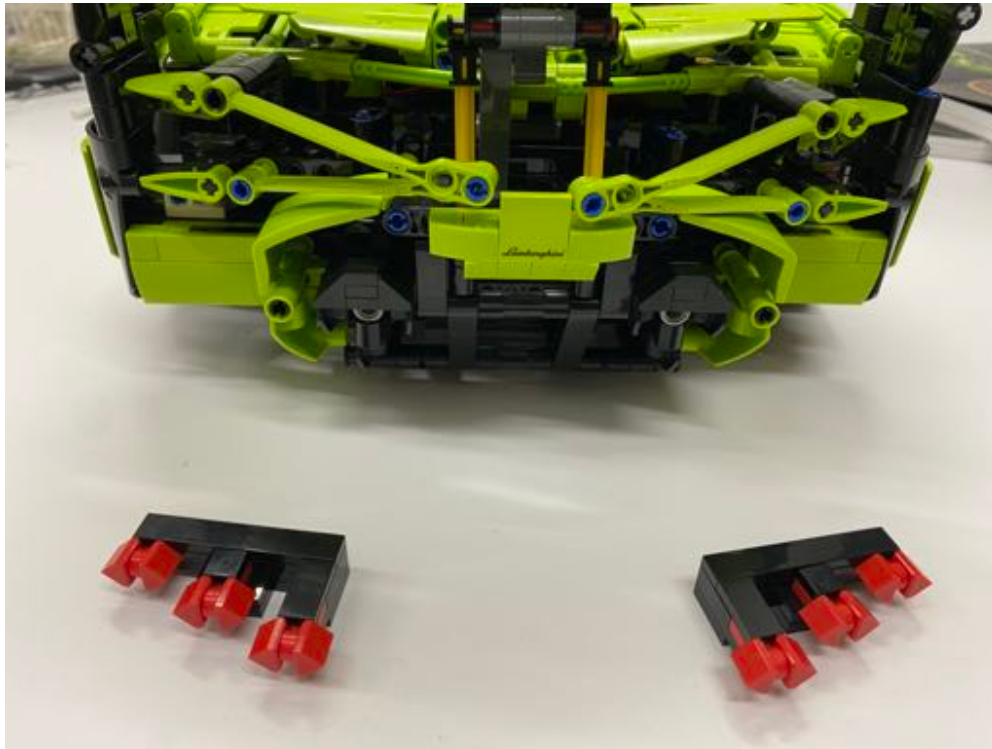

Ready the following light, pile the white tape away and stick it above the seats

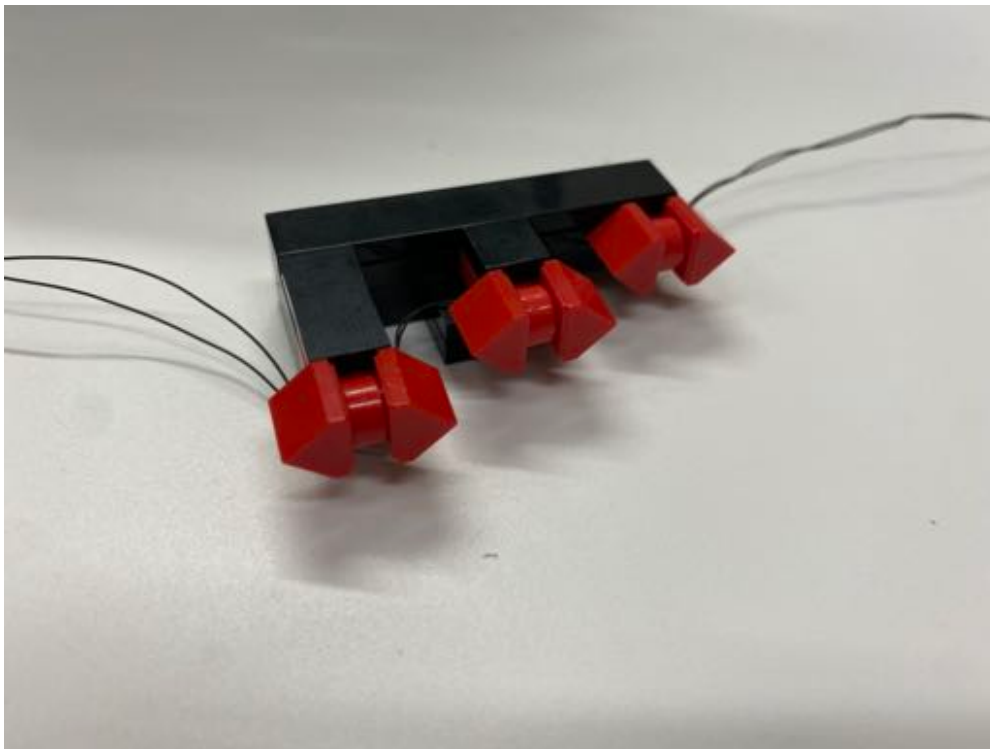

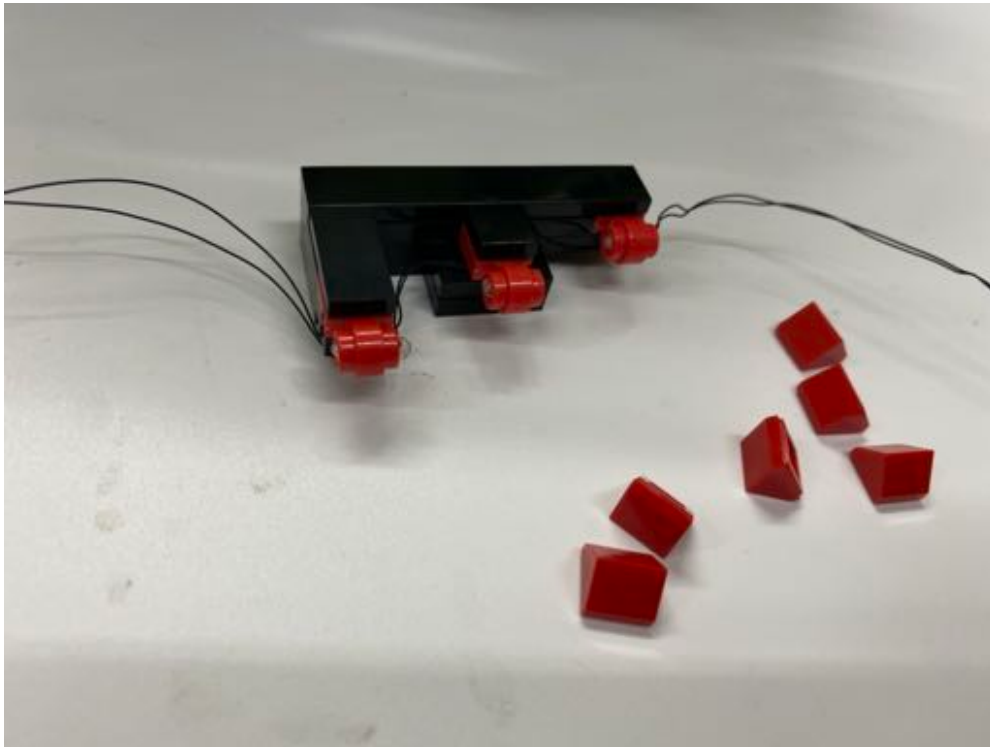

Install the lighting round plates to bottom of the car

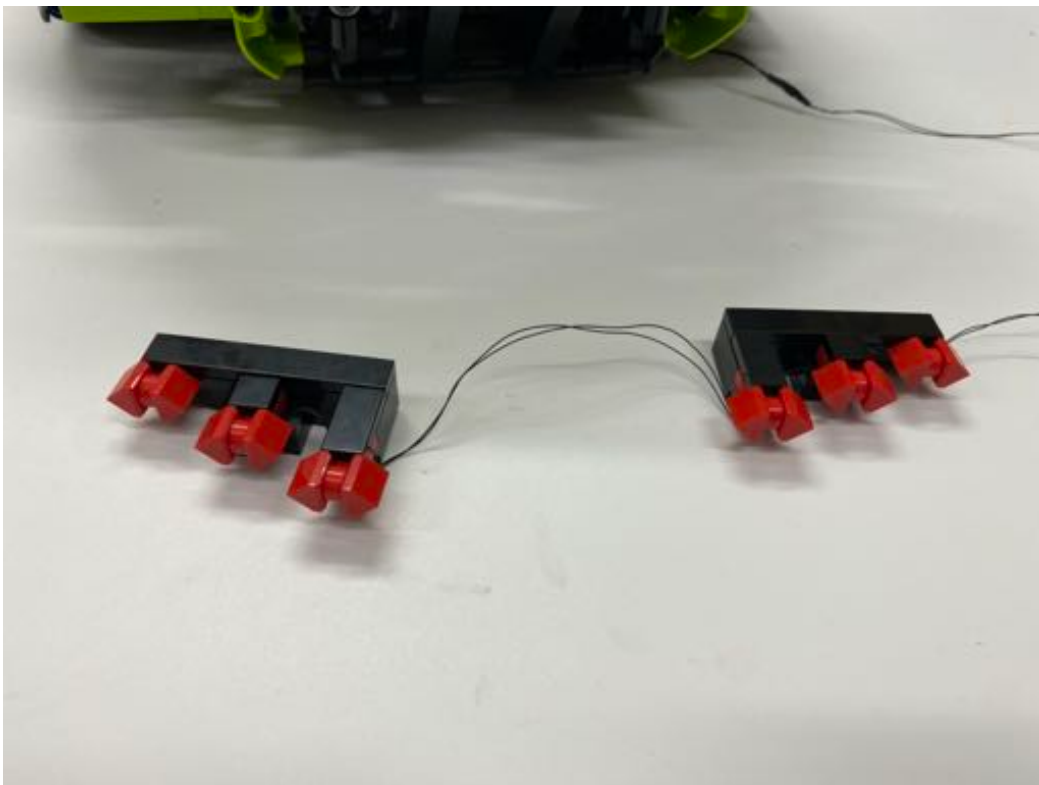

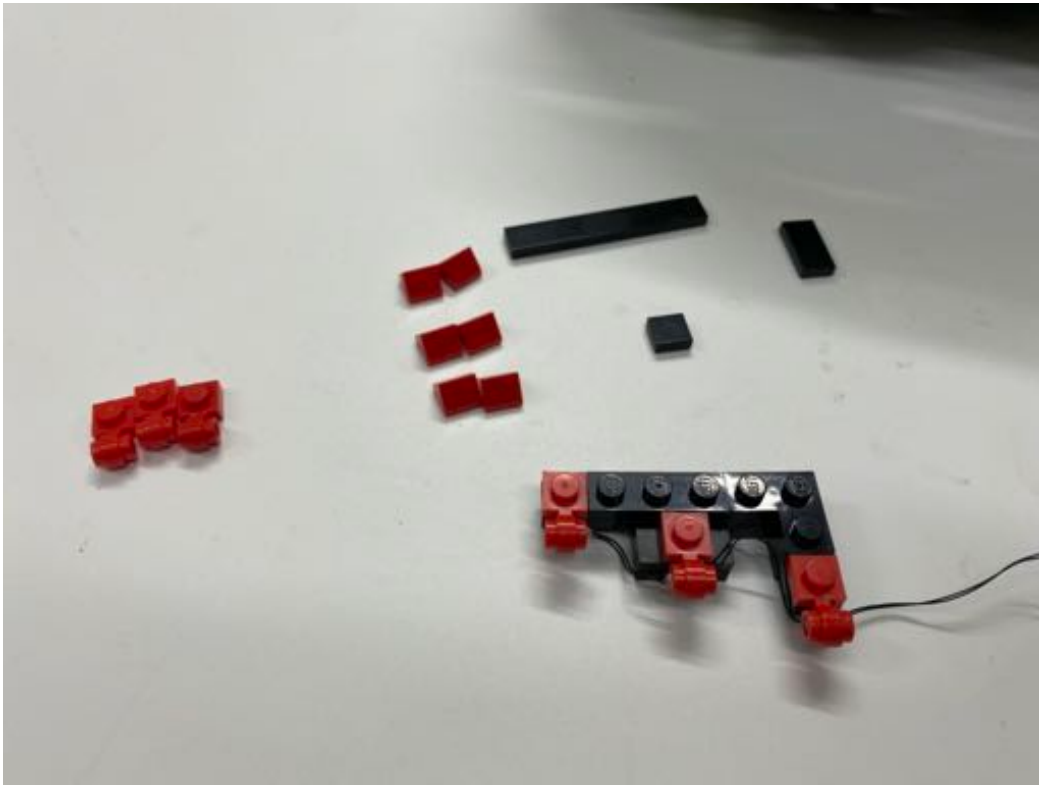

Now it's turn for rear lights, detach the following parts and split as shown

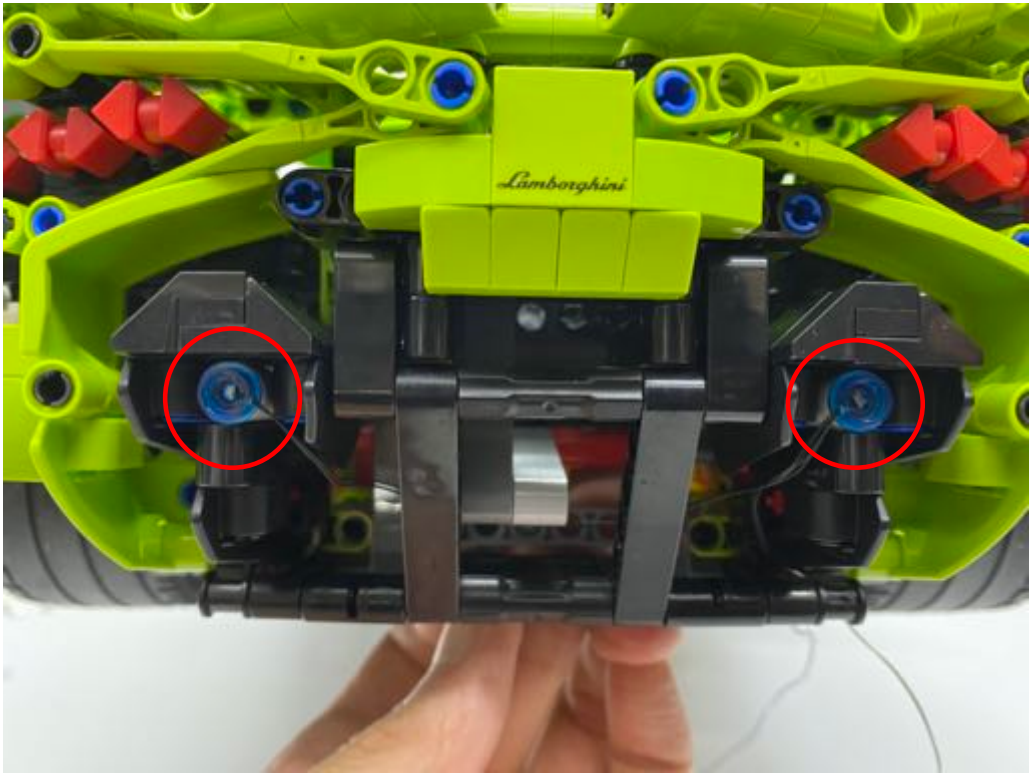

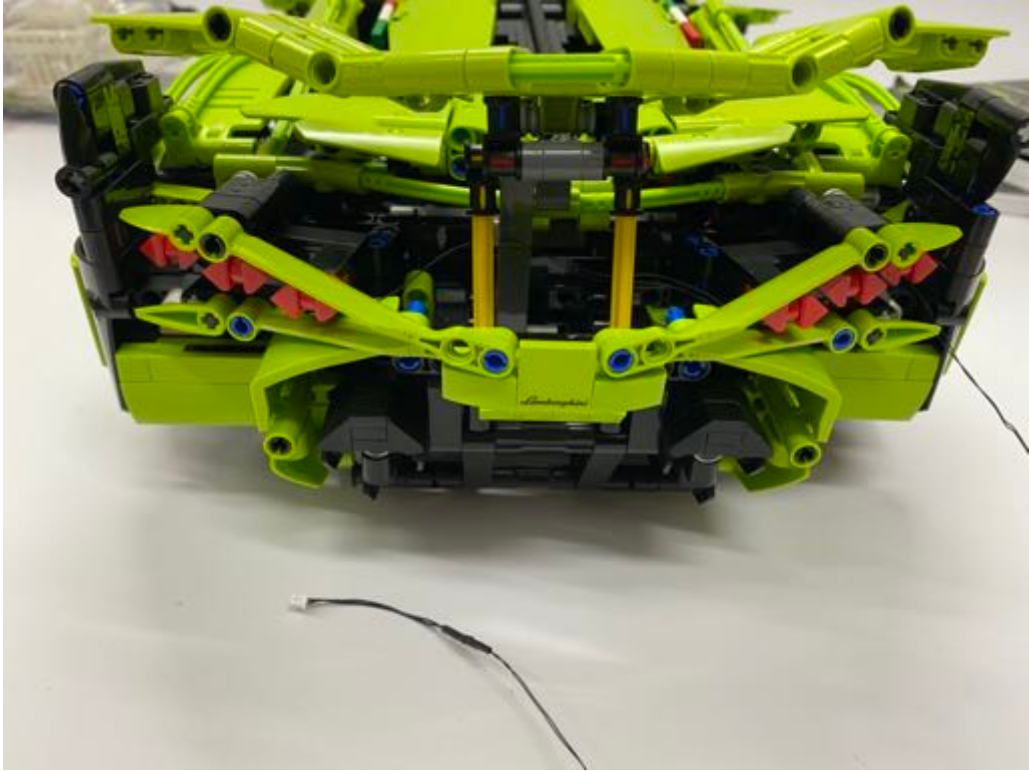

Install the lighting parts, then restore the parts detached

Then install for the other side

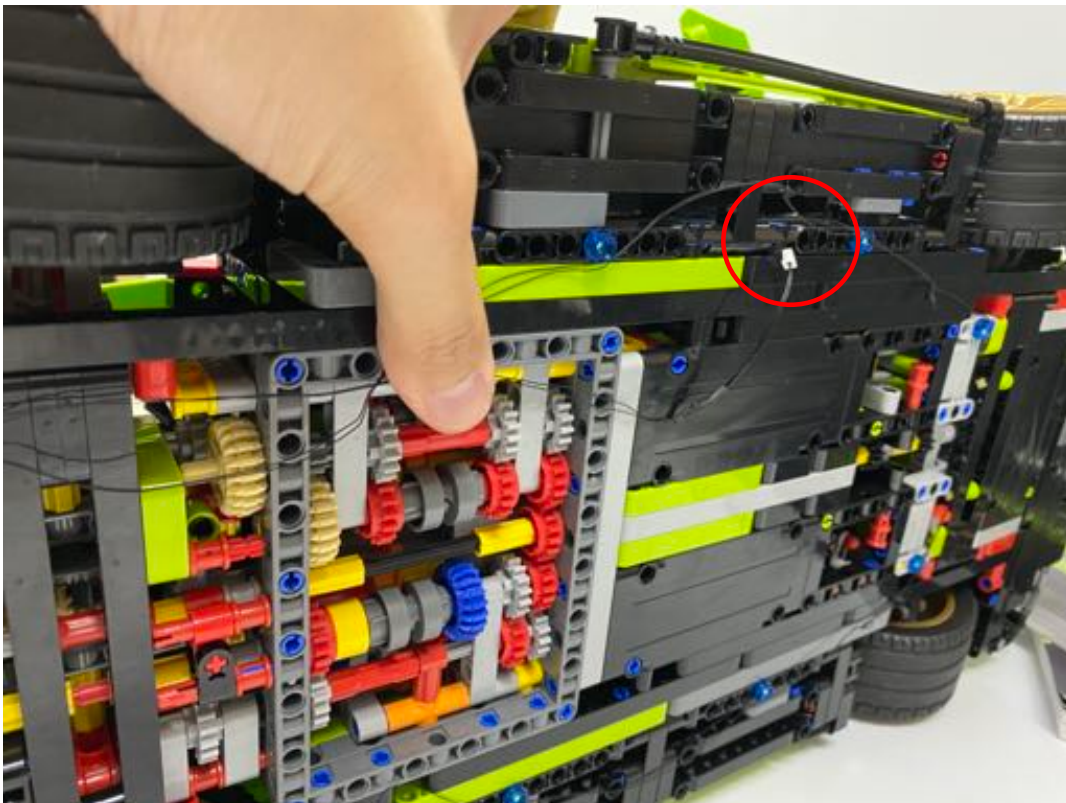

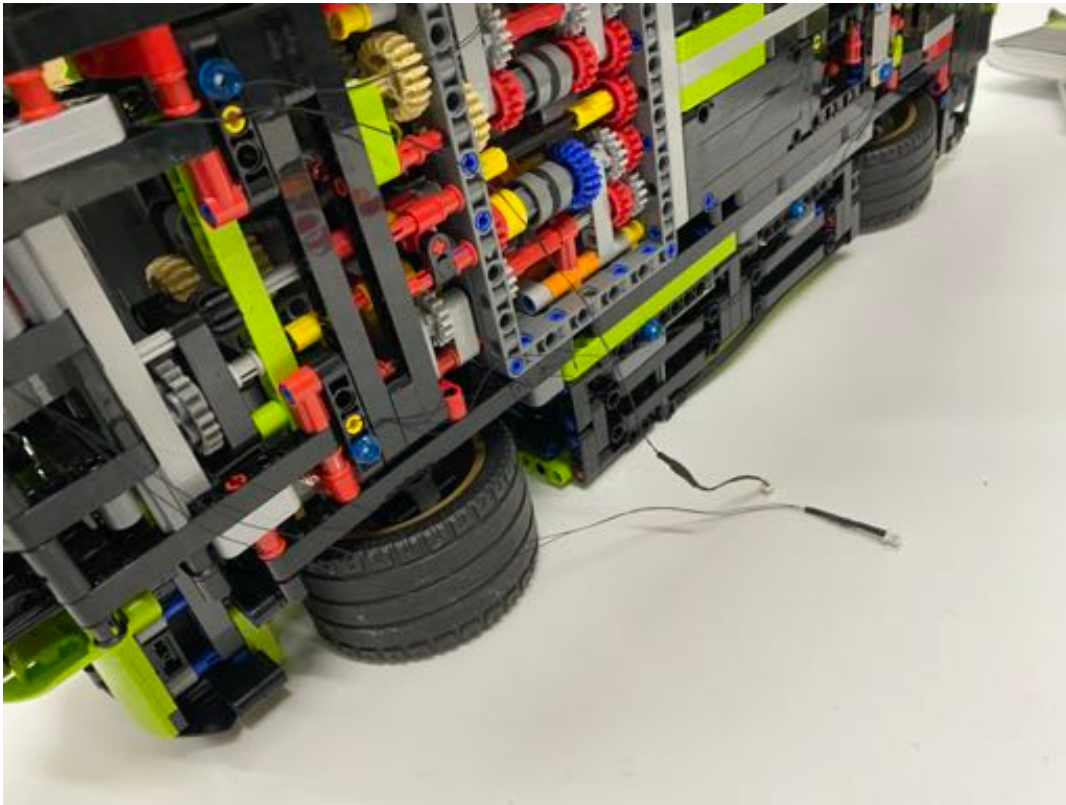

Restore the rear lights, and install two lighting round plates

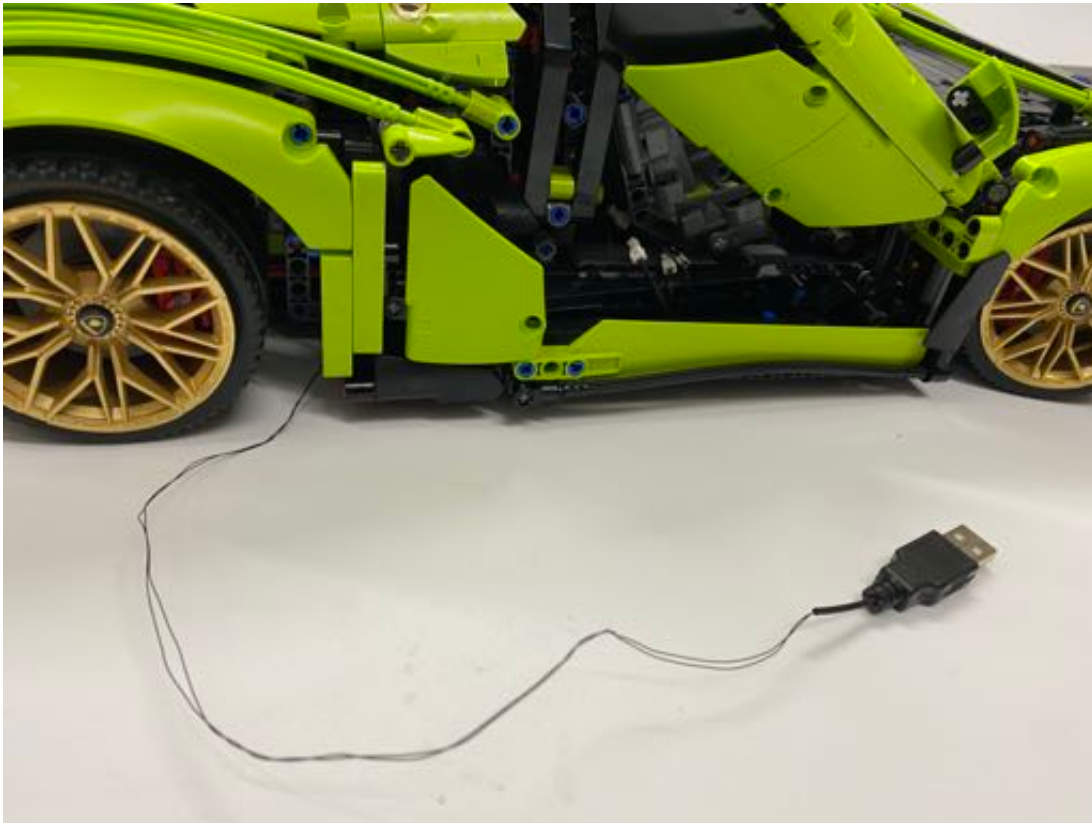

Pull the 2 connectors inside the car through the hole in red circle

Now you have 5 connectors inside the car, connect with USB cable

Hide the connectors under the seat, pull of the USB cable

If powered by battery, the battery case can be placed on the seat
