LISBOA

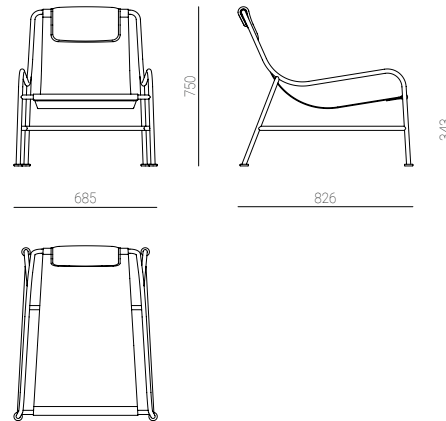

LISBOA product sheet

Embracing the purpose to take a break, LISBOA chair invites you to just sit and relax. Combining many observations from different cultures of how people use chairs and which role they play in their every-day life, Keiji Takeuchi designed the LISBOA lounge chair with a vision.

Made for moments of serenity, this chair is not only aesthetically pleasing but perfect to enjoy the easy life as much as possible. Due to the open structure of organically shaped stainless-steel tubes, the chair is very light, to be flexibly positioned wherever needed. Sitting in a very low position, glasses or books can easily be placed on the ground, so side tables, despite of welcome, are not necessary. Practicality, material, proportions, and purpose create the atmospheric aesthetics of the chair, making it a functional yet sculptural piece of usage.
