CAMPO mirror

CAMPO mirror

ABOUT

CAMPO is a multipurpose mirror that opens a window to simple times. A minimal and honest design that offers a variety of uses. Inspired by traditional wooden cases used in the markets during the early 50's, CAMPO mirror replicates the functionality and spirit of such object.

Simple, trustworthy and helpful, it reflects the values and knowledge in craftsmanship. Its wooden frame allows it to be used in different ways and environments. Set up as a shelf for daily use items and support a routine, to frame and display cherished objects, or simply be used as a mirror.

Available in 3 sizes and 3 wood types, CAMPO is a mirror that fits every room, bringing an authentic and sincere character to any environment.

CARE AND MAINTENANCE

The following care instructions are recommendations only.

MOR seals its veneers with a high-quality finish. For this reason, to clean solid wood and veneered surfaces, we recommend using a soft, slightly damp cloth, with a mild detergent in the case of stubborn dirt. We recommend that you always use environmentally friendly cleaning products and care for your furniture regularly and frequently. Before using any cleaning product, you should test it on an inconspicuous spot. Please follow the cleaning product manufacturer's instructions and contact a professional cleaning company in case of stubborn dirt or stains.

To avoid stains and other damage, liquids should be wiped away immediately. Wet surfaces should be dried immediately with a cloth. To extend the life of our products we apply a natural varnish to highlight and protect the properties of the natural wood. However, wood furniture reacts to environment. Exposure to light can alter its colour and also adapt its own moisture content levels to that of its environment. In the case of excessive fluctuations in temperature and humidity, however, it reacts by cracking and warping.

WARNING

Do not use neat, harsh, strong or abrasive cleaning fluids or furniture polish containing silicone or abrasives. They most commonly contain unsuitable solvents and/or colour additives, which ultimately leave a coating that is very difficult to remove and may affect the colour and finish of the surface. If possible, avoid rubbing the surface while cleaning it, as this will make matte finishes shiny and charge the varnish with static electricity which will attract more dust.
