ECLIPSE tray

ECLIPSE tray

ABOUT

With pure and simple shapes, Alban Le Henry created a set of stylish, elegant and clean trays. Crafted from both natural Portuguese marble or solid ash wood, the ECLIPSE trays feature veining and colouring variations, resulting in one-of-a-kind pieces. The almost hidden handles are a perfect example of form and function at its best, making this piece as decorative as practical.

CARE AND MAINTENANCE

The following care instructions are recommendations only.

Wood

ECLIPSE trays are produced in solid ash wood and without any surface treatment, to maintain their natural properties. Wooden cutting boards need to be kept clean and maintained daily. For this reason, we recommend handwash after each use with a mild soapy water solution. Rinse with hot water and dry. No dishwasher or soaking. After the first few waterings, the wood surface might be a little rough, but this kind of roughness will disappear with use. If decided to apply a finishing, we recommend moisturizing occasionally with a layer of natural beeswax or mineral oil over the board, in order to maintain its good appearance and usability.

Wood reacts to the environment. Exposure to light can alter its colour and also adapt its own moisture content levels to that of its environment. In the case of excessive fluctuations in temperature and humidity, however, it reacts by cracking and warping.

Marble

Marble is a natural material that gives each piece a distinct and unique appearance. It is sensitive to liquids and if they are not removed immediately, they may leave a permanent stain. For this reason, MOR marbles are treated with a sealer that makes the pieces more resistant to stains.

For daily care and cleaning, it is recommended to use a cleaning agent specifically developed for stone or marble. Wipe all spills as soon as they occur. Avoid using abrasive cleaning agents or harsh cleaning detergents on marble, as this will permanently damage the surface.

WARNING

Do not use neat, harsh, strong or abrasive cleaning fluids or furniture polish containing silicone or abrasives. They most commonly contain unsuitable solvents and/or colour additives, which ultimately leave a coating that is very difficult to remove and may affect the colour and finish of the surface.
