MIGO

# MIGO Table

## **ABOUT**

Minimal in its components, MIGO table consists of two parts: a table top, and a conical shaped base, whose top ends with a strap for it to be lifted by.

The soft and friendly shape of the top makes the table suitable for different situations, and supports the versatility and practicality it aims to fulfil. That may be a bedside table for a book, space for cups and small plates for an afternoon with friends, a place for a coffee and some cake, or for a child using the living room as a playground. The name "MIGO" is an abbreviation of "amigo" commonly used to call a friend in Portugal, where MOR is based.

## **CARE AND MAINTENANCE**

The following care instructions are recommendations only.

MOR seals its veneers with a high-quality finish. For this reason, to clean solid wood and veneered surfaces, we recommend using a soft, slightly damp cloth, with a mild detergent in the case of stubborn dirt. We recommend that you always use environmentally friendly cleaning products and care for your furniture regularly and frequently. Before using any cleaning product, you should test it on an inconspicuous spot. Please follow the cleaning product manufacturer's instructions and contact a professional cleaning company in case of stubborn dirt or stains.

To avoid stains and other damage, liquids should be wiped away immediately. Wet surfaces should be dried immediately with a cloth. To extend the life of our products we apply a natural varnish to highlight and protect the properties of the natural wood. However, wood furniture reacts to environment. Exposure to light can alter its colour and also adapt its own moisture content levels to that of its environment. In the case of excessive fluctuations in temperature and humidity, however, it reacts by cracking and warping.

## **WARNING**

Do not use neat, harsh, strong or abrasive cleaning fluids or furniture polish containing silicone or abrasives. They most commonly contain unsuitable solvents and/or colour additives, which ultimately leave a coating that is very difficult to remove and may affect the colour and finish of the veneer surface. If possible, avoid rubbing the surface while cleaning it, as this will make matte finishes shiny and charge the varnish with static electricity which will attract more dust.
