TRAVE tray

TRAVE tray

ABOUT

Designed by Rui Alves, TRAVE tray is a simple rectangular shape featuring a useful rim on the edges, making serving food and drinks a special occasion. A plane surface and two elements that support and elevate it. The simplicity of this principle and its usual representation of geometric design are at the origin of the TRAVE. From the consistency of the shapes results unique, visual and tactile details, capturing attention without obfuscating the objects it supports. Available in 3 variants of natural wood, slight variations in colour can occur due to the handcraftsmanship of this one-of-a-kind piece.

CARE AND MAINTENANCE

The following care instructions are recommendations only.

Wood

MOR seals its veneers with a high-quality finish. For this reason, to clean solid wood and veneered surfaces, we recommend using a soft, slightly damp cloth, with a mild detergent in the case of stubborn dirt. We recommend that you always use environmentally friendly cleaning products and care for your furniture regularly and frequently. Before using any cleaning product, you should test it on an inconspicuous spot. Please follow the cleaning product manufacturer's instructions and contact a professional cleaning company in case of stubborn dirt or stains.

To avoid stains and other damage, liquids should be wiped away immediately. Wet surfaces should be dried immediately with a cloth. To extend the life of our products we apply a natural varnish to highlight and protect the properties of the natural wood. However, wood furniture reacts to environment. Exposure to light can alter its colour and also adapt its own moisture content levels to that of its environment. In the case of excessive fluctuations in temperature and humidity, however, it reacts by cracking and warping.

WARNING

Do not use neat, harsh, strong or abrasive cleaning fluids or furniture polish containing silicone or abrasives. They most commonly contain unsuitable solvents and/or colour additives, which ultimately leave a coating that is very difficult to remove and may affect the colour and finish of the veneer surface. If possible, avoid rubbing the surface while cleaning it, as this will make matte finishes shiny and charge the varnish with static electricity which will attract more dust.
