

10' Regal Snowflake Instructions

1. Each internal edge is labelled with a letter. Organize your segments so each side is next to the segment with its matching letter.

2. Start with the two bottom pieces (which each have holes in the center point). Attach these segments and secure with (4) M6x20 hex bolts.

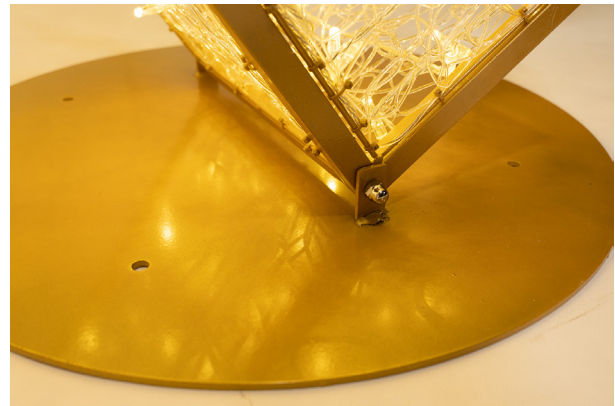

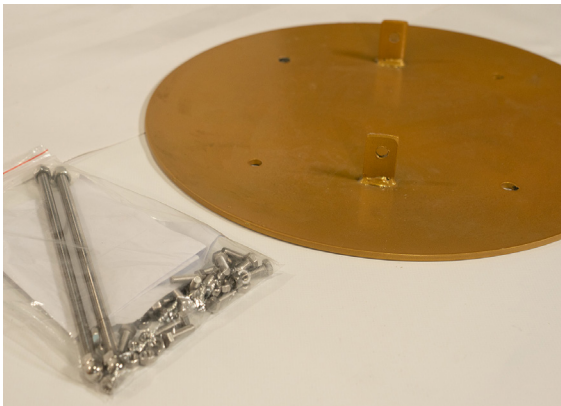

3. Attach the mini light connectors between the two segments.

4. Continue in this fashion with the remaining pieces.

5. Align the holes on the bottom of the snowflake with those on each round base. Slide the provided support bar through the base and snowflake and secure with (2) M8x357 hex bolts. Do this for each base.

6. Attach the mini lights connector at the bottom of the snowflake to the 24V transformer.
