

L Shape Desk Assembly Instructions

The assembly is pretty simple but please don't hesitate to contact us if you are stuck at any point.

- You will first need to connect the two tops together. You can do so with the flat steel brackets we have supplied. You can choose the side you want to install the side top and you can fix them together by attaching the flat brackets half on each top. You can also opt to not have the two tops fixed together if you would rather have more flexibility in placement.
- Next up are the desk legs! Screws and floor protectors are included in the legs box. The wood is pretty soft so you can just drive the screws straight in without the need of pre drilled holes.
- You can place the legs directly on the underside of the desk top as close to the edge as you want or up to 7-8cm away from it depending on what you like more aesthetically! If you have **specifically** requested the desk to have a bit of extra height, then you will need to screw the legs on the wooden cross braces. We have provided 2 full sets of legs in case you decide to use the two tops as two separate desktops.
- There are two included small wooden wedges in case the desk doesn't stand straight on the floor. You can use those wedges on the two corners that don't touch the floor properly and wedge them between the leg and the desktop.
- Once the desk is standing straight on the floor, you can then start the assembly of the shelf. The shelf parts you need are included in a small clear bag. If you can't find the bag, please have another look in the packaging as it sometimes gets missed as in the layers of bubble wrap!
- If you have ordered your desk without a riser shelf, you can skip this paragraph!
 - You can start the shelf by assembling the two brackets with their fixings on both ends. You only need to screw the tube in the fixings up to the point where the end of the tube is aligned with the bottom of the fixing. Some of the thread will always be visible! When you have assembled the brackets, proceed to screw them on the shelf with the screws provided in the small zip bag.
 - Place the shelf on the desktop and after you made sure that everything is aligned the way you want it to be, proceed to screw it in. This is where the short screwdriver we mentioned on the item description comes into play! You will need a short screwdriver or an offset screwdriver set (can be found for less than £10 on Amazon).
- Your desk is now ready!

How to care for your Pastos Co furniture

- **Avoid** excess heat or dryness, as this can cause **wood** to split and **crack**. Be sure to **keep** your **furniture** away from heat sources such as fireplaces or radiators. In damp rooms or during wet, rainy seasons, use a dehumidifier to remove excess moisture from the air. **Keep furniture** out of direct sunlight.
- You can refresh the look of your furniture 6-8 months by dampening a cloth with a bit of teak oil and wiping the surface along the grain.

Thank you for purchasing from Pastos Co :)
