1 Information on carbon monoxide

What is carbon monoxide (CO)?
Carbon monoxide is an invisible, tasteless, and odorless and harmful gas, produced by incomplete combustion of fuels such as coal, natural gas, and wood.

What are the symptoms of carbon monoxide poisoning?
- Mild exposure: Headache, dizziness, nausea, drowsiness, vomiting, fatigue, chest discomfort, impaired vision, and loss of judgment.
- Medium exposure: Severe headache, drowsiness, confusion, rapid breathing, and collapse.
- Severe exposure: Unconsciousness, convulsions, cessation of breathing, and death.

What should do if the carbon monoxide detector goes off?
- Ensure that carbon monoxide cannot threaten anyone's safety.
- Check if there is any gas leakage, fire, or smoke. If there is, evacuate immediately and call 119 (Fire and Rescue).
- Ventilate the area.
- Do not turn on the alarm until the cause has been investigated and the situation is under control.

Where does carbon monoxide come from?
Fuel burning appliances, such as:
- A furnace, a boiler, a water heater, a stove, a fireplace, a grill, a generator, a car, a truck, a motorcycle, a lawn mower, charcoal, and wood.
- Vehicles exhaust gases in enclosed spaces (garage or cabin).
- Blocked chimneys or poorly ventilated spaces.

How do I know if carbon monoxide is present?
You cannot see, taste, or smell carbon monoxide (CO). However, the CO alarm can help. Additional symptoms include the following: If you and others in the house feel dizzy, sick, or have a headache, or if pets or animals are acting restless, it could indicate the presence of CO.

2 Important precautions and warnings

This device is not a substitute for proper installation and maintenance of fuel burning appliances. Do not use the detector for any purpose other than its intended use as described in this manual.

Instructions for use

WARNING
Never tamper with, paint over, or attempt to repair or service the detector. Doing so will void the warranty and may result in the detector not functioning properly.

CAUTION
- Do not paint, glue, or cover the detector, as doing so may affect its performance.
- Do not drop or subject the detector to physical shock.
- Do not immerse the detector in water or other liquids.
- Do not use the detector in environments with high humidity, dust, corrosive gases, or extreme temperatures.
- Do not use the detector if the battery is low or if the device is malfunctioning.
- Do not use the detector if it has been exposed to flames or smoke.
- Do not use the detector if it has been damaged in any way.
- Do not use the detector if it has been exposed to chemicals or solvents.
- Do not use the detector if it has been exposed to excessive vibration.
- Do not use the detector if it has been exposed to excessive heat.
- Do not use the detector if it has been exposed to excessive cold.
- Do not use the detector if it has been exposed to excessive moisture.
- Do not use the detector if it has been exposed to excessive dust.
- Do not use the detector if it has been exposed to excessive corrosive gases.
- Do not use the detector if it has been exposed to excessive extreme temperatures.
- Do not use the detector if it has been exposed to excessive extreme humidity.
- Do not use the detector if it has been exposed to excessive extreme dust.
- Do not use the detector if it has been exposed to excessive extreme

Installeer het gele CO-meldertje

1. Controleer voordat u begint of u het juiste gebied heeft voor het installeren van de koolmonoxide (CO)-melder. Zie de afbeelding hieronder voor de aanbevolen installatiehoogte en -locaties voor optimale prestaties.
2. Nabij het slaapgedeelte (binnen een straal van 3 meter).
3. Op elke verdieping van het huis.
4. Niet in de keuken, badkamer of garage.
5. Op een goed geventileerde plek.
6. Niet in de buurt van ventilatieopeningen.

5.3 Eerste gebruik

Voordat u de melder in gebruik neemt, moet u de batterijen activeren.

Stap 1 Neem een van de twee plastic kaarten van de kaartenset.

Stap 2 Steek de plastic kaart in de opening aan de achterkant van het apparaat (met de pijl naar binnen).

Stap 3 Als de melder is geactiveerd, hoort u een bevestigingstoon. **Testen**
Overspan Druk gedurende 10 seconden op de testknop om te controleren of de melder goed werkt. Laat los wanneer u een luide piep hoort.
