

Fiberglass Lite®

What is Fiberglass Lite®?

Campania's Fiberglass, branded as Lite®, is a composite material consisting of unsaturated polyester resin, sand, stone powder, talc powder, and fiberglass. Our fiberglass (AKA fiber reinforced plastic (FRP)) meets the standards for commercial use. Most of our Lite® planters are reinforced with internal ribbing to enhance their strength and durability. MSDS data and strength ratings available upon request. Lite® is manufactured and imported from our partner factory in Vietnam.

Why choose Fiberglass Lite®?

Lite® planters are rated for both indoor and outdoor use and frequently specified for rooftops and terraces, hospitality customersupport, public space installations, and restaurants. They are a great choice for jobs that do not allow for heavy-weight materials and where large scale plantings are required. Because of their light weight, fiberglass planters are easier to ship and material handle on the job. Fiberglass planters can withstand UV exposure and extreme temperatures, from high heat to frost and can tolerate the seasonal thaw cycles. Additionally, they won't corrode due to exposure or direct contact with soil. There is no need to use plastic liners with Campania's Lite® planters. Although we recommend that you take advantage of the quick turnaround of our stocked product; these shapes, finishes, and/or sizes are not always right for every job. Campania has the capability to produce custom shapes, sizes, and colors in our Vietnamese factory.

Available Textures

Our fiberglass line is offered in multiple textures: Standard, Concrete, Glossy, Premium, Taos and Ribbed. Not all styles are available in all textures.

Available Colors

Depending on the texture, we offer the following colors:

Standard Texture:	Concrete Texture:	Premium Texture:	Taos Texture:	Ribbed Texture:
Onyx Black	Stone Grey	Charcoal	Carbon	Lead
Lead		Riverstone	Pumice	Ivory
Rust				
Ivory				
English Lead				
Chalk

Care & Maintenance

Outdoor Planting Instructions: Our fiberglass planters are equipped with pre-installed drainage holes and raised feet to allow for drainage. The drain holes must be kept clear to maintain the longevity of your planter, especially in climates that undergo freeze thaw cycles in the winter. We recommend: Covering the drain holes with a mesh screen or equivalent to keep debris from clogging the openings; Filling the bottom of the planter with non-porous drainage material; Filling the remainder of the planter with a well-draining soil mix that will not retain water; and lastly, covering the soil with decorative mulch or pine bark to the top rim of the planter to discourage water from pooling on the surface. For indoor use, Campana offers a saucer system for the Farnley and Sandal planter series and plugs are available upon request.

Cleaning Instructions: Campana Lite® planters can be cleaned with either water or Windex® with Ammonia-D. Spray down the surface of the planter where it is dirty and use a lint-free cloth or sponge to wipe the surface. Note that it may take several cycles of wiping and drying before the planter is completely clean. This is normal and to be expected with the texture in the fiberglass. Do not pressure wash, use alcohol based cleaners, apply corrosive cleaners or clean with anything abrasive.
