REUSABLE URETHANE STENCILS

PRODUCT GUIDE

Bring new dimension to exposed aggregate and other flatwork finishes with Concrete Dimensions reusable urethane stencils. As one of the first truly new decorative concrete innovations in years, Concrete Dimensions unlock new design potential.

Easily set your work apart from the rest with these simple-to-use and highly versatile tools. With infinite reusability, Concrete Dimensions are a cost-effective alternative or addition to traditional stamps, textures, and paper stencils. Concrete Dimensions stencils will help concrete professionals provide a significant added value that increases customer satisfaction and earning potential.

Concrete Dimensions stencils are compatible with exposed aggregate, broom finishes, light textures, Color Hardener, and plain flatwork. This incredibly versatile tool makes an excellent upgrade to any number of classic and trending architectural concrete applications. Even non-decorative elements can be upgraded using these simple tools.

Whether acting as the focal point or simply an add-on to an existing design, Concrete Dimensions stencils are a welcome addition to the decorative concrete space.

CONCRETE DIMENSIONS

SO EASY TO USE – AND REUSE!

Concrete Dimensions stencils are an easy-to-use tool requiring little additional labor, one of the biggest advantages over traditional patterning and engraving methods.

Once the concrete has been finished and stencil placement is set, simply use a float to embed the stencils in the concrete. Finish smooth and wait for the concrete to harden. For an exposed aggregate finish, apply Surface Deactivator at this point. When the concrete has hardened, power wash the deactivated surface and peel up the stencils. It is just that simple.

Once the stencil is removed, it is ready for reuse! Concrete Dimensions stencils are completely reusable; their unique urethane is durable enough to hold shape and withstand years of repeated use, yet flexible for easy storage between jobs.

MAKING A BIG IMPRESSION IN DECORATIVE CONCRETE

Concrete Dimensions was quite literally developed for concrete finishers by concrete finishers. What would eventually become Concrete Dimensions was first used by a concrete contractor in the mid 2010s to solve a problem on a specific job. The contractor wanted to introduce unique, detailed patterns into the project. Unfortunately, there was no tool on the market that would do what was needed, and engraving was not feasible. The contractor decided to make custom tooling.

In 2017, Solomon Colors brought this product on board and continued to develop it. Since then, the Concrete Dimensions line has expanded tremendously. In this catalog, you will find a wide range of patterns and designs including medallions, borders, radii, letters and numbers, animals, and flags. This ever-changing selection will continue to grow to meet the demands of the decorative concrete professional.

Solomon Colors continues to add new stencil patterns to expand your creative opportunities. Ongoing research and development will make Concrete Dimensions progressively easier to use, with more possibilities than ever imagined. Join us as we work to make Concrete Dimensions the next must-have tool in decorative concrete.
