MISSION

OUR JOURNEY TO A BETTER BUSINESS

FARLA MEDICAL HEALTHCARE LTD

Farla Medical Healthcare has embarked on an ambitious journey towards sustainability, aligning its operations with the principles of environmental responsibility. With a deep commitment to reducing its carbon footprint, Farla Medical Healthcare has established a comprehensive carbon reduction plan, firmly rooted in science-based targets.

As part of our sustainability initiatives, we analyse our greenhouse gas emissions across different scopes, in accordance with the Greenhouse Gas Protocol categories. The transparency in our data allows us to identify key areas for improvement and implement effective strategies to minimize our impact on the environment.

In Scope 1, we address mobile combustion, where we have recorded 4.35 tCO<sub>2</sub>e emissions. Farla Medical Healthcare is actively exploring alternative energy sources and efficient technologies to significantly reduce these emissions, thereby contributing to the near-term science-based target of a 42% reduction in absolute scope 1 and scope 2 GHG emissions by 2030 from our 2022 baseline.

Moving to Scope 2 emissions, we recognize the importance of electricity consumption and its impact on the environment. With 28.62 tCO<sub>2</sub>e from market-based electricity and 18.11 tCO<sub>2</sub>e from location-based electricity, we are implementing measures to transition towards cleaner and renewable energy sources. By doing so, we aim to align ourselves with the near-term science-based target, ensuring a substantial reduction in our overall emissions.

CLIMATE

MISSION

CO<sub>2</sub> Emissions - 2022

Scope	Greenhouse Gas Protocol Category	Emissions	Unit
Scope 1	Mobile combustion	4.35	tCO <sub>2</sub> e
Scope 2	Electricity (market-based)	28.62	tCO <sub>2</sub> e
	Electricity (location-based)	18.11	tCO <sub>2</sub> e
	Heat	67.10	tCO <sub>2</sub> e
Scope 3	Purchased goods and services	1112.58	tCO <sub>2</sub> e
	Capital goods	245.26	tCO <sub>2</sub> e
	Fuel- and Energy-Related Activities	17.12	tCO <sub>2</sub> e
	Upstream transportation and distribution	438.72	tCO <sub>2</sub> e
	Waste generated in operations	0.68	tCO <sub>2</sub> e

Heat, accounting for 67.10 tCO<sub>2</sub>e in Scope 2, is another area where Farla Medical Healthcare is actively investing in sustainable solutions. From energy-efficient heating systems to exploring renewable energy options, our commitment is to curtail emissions while maintaining the highest standards of healthcare.

Scope 3 emissions encompass a broader spectrum of activities, including purchased goods and services, capital goods, fuel- and energy-related activities, upstream transportation and distribution, and waste generated in operations. These categories collectively contribute to 1814.36 tCO<sub>2</sub>e. Farla Medical Healthcare acknowledges the significance of addressing these emissions and is dedicated to measuring and reducing our scope 3 emissions, in line with our near-term science-based target.

Looking towards the future, Farla Medical Healthcare is unwavering in its commitment to achieving a net-zero carbon footprint by 2050. This ambitious goal entails a 90% reduction in absolute scope 1, 2, and 3 GHG emissions by 2050 from our 2022 baseline. This net-zero science-based target underscores our dedication to playing a pivotal role in mitigating climate change and preserving the health of our planet for generations to come.

## NEAR-TERM SCIENCE-BASED TARGET:

“Our company commits to reduce absolute scope 1 and scope 2 GHG emissions for 42 % by 2030 from a 2022 base year, and to measure and reduce its scope 3 emissions.”

## NET-ZERO SCIENCE-BASED TARGET:

“Our company commits to reach net-zero by 2050. As part of this, we commit to reduce absolute scope 1, 2 and 3 GHG emissions for 90 % by 2050 from a 2022 base year.”
