The **T/LL130** series is designed for use in water, coolant or fuel/oil tanks and provides a factory set variable resistive, voltage or PWM (Pulse Width Modulated) output suitable for driving industry standard fuel gauges or connecting into PLCs.

The device has no moving parts and can be mounted at any angle above horizontal as long as it covers the whole depth of the tank. The unit cannot be inverted. An optional manual calibration feature is available.

### SPECIFICATION

#### **Liquid Types**

Liquids compatible with the construction materials, typically diesel, kerosene, petrol, water. Not suitable for fuels which contain Toluene.

**Dimensions** 

Probe Length: Min. 200 mm, Max. 1000 mm mobile / 2000 mm static

Threads: ½" BSPT, 1" BSPT, ½" NPT Optional Flange: Fozmula F/T1 SAE 5 Hole

**Performance** 

Accuracy: ±2% of depth @ 20 °C

**Materials** 

Enclosure: 30% glass filled nylon Internal Spacers: Polypropylene

Internal Electrode:PTFEEnd plug:PTFESensor Tube:316 stainless steelWetted Seals:Viton (FKM)

**Environmental Ratings** 

Sealing: IP67 with mating connector Shock: 50 g, 6.3 ms Max Pressure: 1 bar Vibration: 15.3 Grms

BS EN 60068-2-64:1993

Operating Temp: -20 °C to +85 °C Weight: 300 g (1 m long sensor)

**Electrical** 

**Supply Voltage:** 9-34 VDC **Supply Current:** 30 mA

Supply Protection: Over-voltage 80 VDC for 2 minutes.

Reverse polarity.

**Signal Output:** Resistance range; 0-250  $\Omega$  or 250-0  $\Omega$ , 2  $\Omega$  steps, 0.4 W max.

Voltage source range; 0-5 V or 5-0 V, 20 mV steps, 10 mA max.

PWM 8 kHz on a 5 VDC rail.

Alarm Output: Switch to ground. Max 100 mA. High or low level.

Default setting is 12.5% of full level. Minimum 30 mm from sensor end.

**Connections:** 4 Way Delphi Packard Metri-Pack 150 Series. **Mating Connector:** Fozmula **C/K1** (Delphi Packard Metri-Pack 150)

To fit 0.8-1.0 mm<sup>2</sup> conductor, Ø1.6-2.15 mm sleeve.

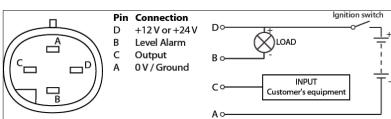

## Calibration Instructions (Models 133, 134 & 135)

Units will be supplied calibrated for diesel. They can be recalibrated for alternative fuels: **Full Point:** 

- 1. Install sensor in the tank and power on.
- 2. Fill tank to required full level.
- Remove calibration bung from sensor and use a suitable tool to depress PCB mounted calibration button. Hold for 5 seconds to set full point. Release button.
- 4. Check full point and refit bung.

#### **Empty Point (if required):**

- Fill tank to required level or, for Min. Empty Level, remove from tank and shake to remove excess liquid.
- 2. Disconnect power.
- 3. Remove calibration bung from sensor and use a suitable tool to depress PCB mounted calibration button then reconnect power whilst depressing calibration button. Continue to depress for a further 5 seconds to set empty point. Release button.
- Check empty point and refit bung.
