Protect yourself from mold in your ductwork

- Filter the air that comes out of your ducts before you breathe it in.
- Duct work may contain mold. Mold spores and mold mycotoxins have been shown to aggravate the symptoms of asthma, allergies and other respiratory problems as well as cause long-term harm to health.

**A simple cost-effective installation**

- With the AllerAir whole house air purifying units, clean air is delivered by your existing ventilation system with a convenient cost-effective installation.
- Simply install the inflow and outflow ducts of the air purifier to the cold air side of your system, before the heat exchanger. The air flow in your heat exchanger is not changed.

**A choice of models to suit your needs**

- Air Handler units are available with the same range of options as the standard models and can be tailored to suit your needs.
