ROLL WEIGHT	28kg

TYPICAL APPLICATIONS

Superclad® Privacy/Shade netting is a versatile and widely used product that provides protection and privacy in a variety of outdoor settings. The primary purpose of this netting is to block out sunlight, UV rays, and other elements while also providing a level of privacy. It is commonly used in residential and commercial settings, such as balconies, gardens, and construction sites.

Privacy/shade netting offers several benefits, these include; reducing the amount of heat and glare, protecting outdoor furniture and plants from weather damage, and adding a decorative touch to outdoor spaces. It is also an eco-friendly and cost-effective alternative to traditional fencing or solid structures. Overall, privacy/shade netting is an excellent solution for those looking to obscure construction works from the general public or create a comfortable and private outdoor environment.

Recommended Fixing Method: Netting/Zip Ties or Bungee Ties

FEATURES & BENEFITS

Privacy Measure: Privacy netting provides a high level of privacy (shade rating of 98%), obscuring the construction site from the eyes of the general public. This is particularly important when the site is located in a busy or densely populated area.

Blocks Sunlight: The 98% shade factor of this netting blocks most of the sunlight, reducing heat and glare in the construction area. This makes it more comfortable for workers to carry out their tasks and also protects the materials and equipment from the damaging effects of prolonged exposure to sunlight.

Wind Resistance: Privacy netting is designed to withstand high winds, which can be common in construction sites. This means it won't tear or fall down easily, providing a durable barrier against wind and debris.

Easy to Install: Privacy netting is easy to install and can be attached to the scaffolding or fencing using zip ties or bungee cords. This saves time and effort compared to more permanent fencing options.

Cost-effective: Privacy netting is a cost-effective solution for construction sites that require privacy and shade. It is less expensive than traditional fencing and can be reused multiple times, making it an economical choice for construction companies.
