

Lantern setup instructions

Step 1:

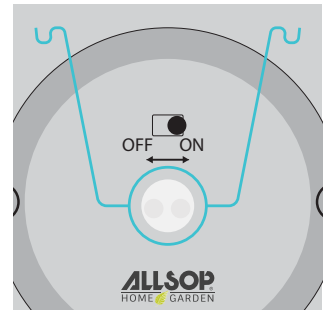

Attach the wire hanging handle by inserting the curved ends of the handle into the raised tabs located on the top of the plastic solar housing compartment.

**Step 2:**

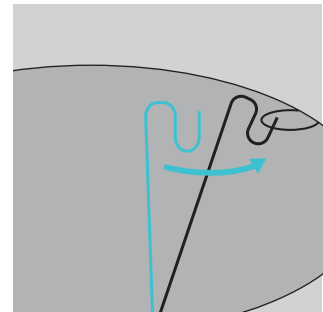

On the bottom side of the plastic solar housing compartment, slide the power switch from the "Off" position over to the "On" position. This activates the AAA rechargeable battery that is inside of the solar housing compartment.

**Step 3:**

Insert the circular end of the metal wire frame support around the Dual LED bulb. Pull the lantern up to begin to form a globe shape.

**Step 4:**

Attach the "notched" ends of the wire frame support into the wire rings located on the bottom of the lantern.

**Step 5:**

Hang your lantern where it will receive direct sunlight. Solar products will produce optimum results when fully charged in direct sunlight for between 6-8 hours each day.
