

ROAD ANGEL™

Halo Pro – Firmware Update

1. Download the Firmware update file from roadangelgroup.com
2. Locate the downloaded “Update” zip folder and unzip it.
3. Place the “Update” folder in the top-level directory on an SD card via a computer.
4. Insert SD card into the Halo Pro.
5. Power on the Halo Pro. An audio prompt will state it is updating and not to power off.
6. Wait for it to reboot and say “Halo Active”. The firmware has now been updated.
7. Delete the update folder from the SD card afterwards else it will update every time it turns on.
