

Reserve Mountain Wheel Build Tech Sheet						
Spokes	-All mountain wheel use Sapim D-Lite w/ S-Lock Spokes					
	-All aluminum mountain wheels use Sapim Race w/ S-Lock Spokes					
	-All gravel wheels use Sapim CX-Ray Aero straight pull spokes					
	-28 XC on DT Swiss 180 use Sapim CX-Ray Aero straight pull spokes					
Nipples	-All mountain wheel use Sapim Secure Lock Aluminum, Double Square, 16g, 18mm					
Lacing	-3x pattern for 28 and 32 hole wheels					
	-2x pattern for 24 hole wheels					
	-Only thread each nipple on a few turns while lacing. Do not tension any spokes until the entire wheel is laced					
	-Add tension slowly and evenly after lacing					
Spoke Freeze	-When the wheel is complete, add one dot of spoke freeze to each spoke-nipple interface					
	-Once applied to each nipple, spin the wheel in the stand to let the spoke freeze work its way into the threads					
	-Clean thoroughly with isopropyl alcohol after application					
Truing	-True sidestroke, hop, and dish to within 0.4mm					
	-Ensure that tension remains balanced					
	-Take precaution to minimize spoke winding when adding tension					
Destress	-Destress frequently when adding tension to the wheel. Every round of adding tension should be followed by destressing.					
	-If you adjust more than 5 spokes while truing, destress the wheel.					
Final Spoke Tensions	-Finished tight-side tension: 1000-1300n					
	-Finished loose-side tension: balance within 300n					
	-Tension readings vary between tension meter types. Use your tension meter's conversion chart to find finished tension.
