MAINTENANCE & CLEANING GUIDE

ARTIFICIAL LIVING WALLS & PLANTS

Follow these simple steps to keep your artificial plants and living walls looking great for longer

CLEANING AN OUTDOOR ARTIFICIAL LIVING WALL

Occasionally you may need to clean your Artificial Living Wall from Designer Plants, fortunately this is a very simple and easy process due to our RealTex highly durable materials which allow for easy cleaning.

- Simply hose the panel down with a mist spray nozzle, and for any stubborn dust use a cloth.

Note: Do not use chemicals (they aren't required)

CLEANING AN INDOOR ARTIFICIAL LIVING WALL

Designer Plants artificial living walls require very little cleaning when inside, though to keep them looking 'fresh' we recommend one simple step:

- As required use a light misting and damp cloth to wipe the leaves down (typically every 6 months - 1 year is recommended).

Note: Water can be used also if your surrounding space won't be damaged

CLEANING YOUR ARTIFICIAL PLANT

Artificial Plants are super easy to clean and can be refreshed with 2 simple steps:

- Apply artificial plant cleaner (or if you cannot access this water can also be used) to the leaves with a gentle mist (do not soak)
- Use a cloth or paper towel to wipe the leaves dry. Note: If your leaves are very dusty wipe them prior to applying the spray.

Note: Do not use chemicals (they aren't required)

MAINTENANCE OF YOUR ARTIFICIAL LIVING WALL OR PLANT

As with everything maintenance will prolong the appearance and life-span of your artificial plants, and we recommend a few key steps and guidelines to follow:

- Where your plant / living wall is in sunlight - apply UV protection spray (whilst our UV rated green walls do not require this - it will of ocuse assist in extending the lifespan - noting: our UV green walls already exceed industry standards on performance in direct sunlight).

NOTES / TIPS

- Do not use excessive force to clean your plant (high pressure hoses or power tools).
- Occasionally, small leaves may fall off - these can simply be attached with glue or in many instances cable ties.
- Ladders / scaffold should not be leant up against the artificial living walls.
