

# Premium Belts

## Product Information

**SECURE**  
COVERS

24/11/22

Premium Belts provide a unique and effective solution to stop your gravel bags from falling and slipping off your clamp.

Each belt has **12 hooks** for attaching gravel bags, and is laid left to right across the clamp. Belts can be joined together using a connecting hook for larger clamps.

The belts should be laid across the clamp from left to right every ten meters, or every five meters in windy locations. Belts should also be laid across any joins where silage film or covers overlap.

PROPERTIES	VALUES
Raw material of belt	100% Virgin HDPE woven, UV stabilised
UV Resistance	1000 KLy
Tensile Strength of the 10.2cm width belt (ISO10319:2015)	155 KN/m
Tensile Strength of the 4.5cm width loop (ISO10319:2015)	176 KN/m
Breaking power of the joints of loops with hooks each	4.40 KN
Breaking power of the belt end loops each	6.50 KN
10.2cm width belt thickness	1.4 mm
10.2cm width belt weight	537 gsm (54.8 g/m)
4.5cm width webbing thickness (for loops)	1.5 mm
4.5cm width webbing weight (for loops)	608 gsm (27.4 g/m)
