Secure Covers®

Product Information

SECURE® COVERS

24/11/22

Secure Covers® netting is a unique **300 gsm** knitted HDPE protective netting for silage clamps, bunkers and feed storage bags. Secure Covers have a unique **1000 Kly** UV stabilised hexagonal filament structure and knitted weave which does not fray or tear ensuring a long lifespan.

Secure Covers protect silage films and feed storage bags from bird and wildlife damage while holding films in place against the silage surface. Secure Covers unique three dimensional knitted design and filament structure is industry leading in its wind lift mitigation staying in place 9 times longer on the surface of a silage sheet in wind tunnel trials compared to conventional woven netting. The unique knitted design also ensures any holes of punctures do not fray and can be easily repaired.

Secure Covers are placed on top of UV stable silage films or feed storage bags and weighted down with gravel bags around the perimeter and left to right across the clamp or bunker. Where two separate Secure Covers join there should be a 1.5m overlap which should match the overlap of the silage films below this join which should then be secured with a line of gravel bags. When removed the Secure Covers should be rolled and stored undercover away from direct sunlight.

Secure Covers®

Technical information

SECURE COVERS

PROPERTIES	WARP	WEFT
Raw - material	100% Virgin Polypropylene Woven UV Stabilized	
Colour	Green	
Thread	660 DEN	
Knitting structure	8 x 10 loops / inch²	
Weight	300 gsm	
Shading	70%	
Wind resistance	66%	
Tensile strength (ISO 13934-1)	18.8 KN/m	17.5 KN/m
UV Resistance	1000 - 2000 KLy	

24/11/22

Green - High strength reusable cover - 100% recyclable
