The latest product in the RTS Tactical line up is the re-engineered RTS Tactical Advanced Sleek 2.0 Plate Carrier. This continues the RTS Tactical tradition of cutting-edge innovation that has established it as an industry leader in the manufacture of outstanding tactical gear.

The Sleek 2.0 is designed specifically as a covert mission plate carrier. A low-profile solution to the need for armor in the rapidly changing tactical situations encountered by the warfighter and operator. Designed for the user who needs a low profile and full active ballistic protection. Discreet, yet quick and easy to don and doff, it is perfect for use on undercover operations.

While ballistic protection is critical, the additional benefit of comfort is also important. The elastic side construction keeps the armor inserts snug against the body while in motion. This is not only comfortable while wearing but allows the operator to wear the carrier for longer without experiencing discomfort.

While the carrier is sleek, lightweight and discreet, it is also tough and sacrifices nothing when it comes to protection.

Plates that can be used with the Sleek 2.0 include:

- ✔ 10x12 Level IIIA Soft
- ✔ 10x12 Level III & III+ Steel
- ✔ 10x12 Level IV Ceramic.
