THE HIGHEST QUALITY SEEDS

THE HIGHEST QUALITY SEEDS

# SEEDS CATALOGUE

Pyramid Seeds aims to distribute feminized cannabis seeds to professional growers, as well as to all people on the trade. Our products have been selected for their flavour, yield and quality, and are easy to cultivate while they offer a high level of productivity and a very affordable price. We offer you the opportunity to experience new varieties and exquisite flavours with a considerable effect. In this brochure you will find information on characteristics of each variety, genetics, cultivation, flavours and effects.

In order to prevent the access of anyone under the age of 18 to such products, our seeds are sold only in establishments for adults. Pyramid Seeds' varieties and yields have been verified in a number of crops. Regarding auto-flowering varieties, they are automatic in a 100% and their sizes can vary depending on cultivation conditions.

We reached mentioned heights and maximum yields with seeds sowed in May when daily sunshine in Spain reaches its maximum length, and resulting harvests collected during July and August. This is the period when auto-flowering varieties can reach their highest level of productivity. All our strains are a 99% feminized and the germination tests reveal a 97% of success. For indoor crops we recommend 600W lighting equipment. All data provided in this brochure is for informational purposes only, and we do not wish to encourage our readers to break the law.

Sincerely, Pyramid Seeds team.

# NORTHERN LIGHTS

## FEMINIZED VERSION

INDICA 90%

## AUTO VERSION

This strain is the feminized variety of an ancient phenotype, very difficult to find nowadays. This is a small, robust plant, with a slow and very compact growth. It has broad leaves and an intense green colour, its buds are thick and well coated with resin. Its fragrance and taste are strongly sweet. Northern Lights has been presented in various cannabis competitions in which it has been awarded with the first prize in hydroponics in "Bella Flor 2006" and with the second prize in "Hidroponía Spannabis 2007".

**INDOOR:** 55 days +500gr\*

This strain is the autoflowering phenotype of the latest generation that comes from one of the most used varieties for making crosses. A plant that can reach a fairly large size, in some cases it can exceed up to 1 meter in height, so it is a very productive genetics. Auto Northern Lights is one of the automatic varieties that most resemble its feminized version. It has a fruity flavour and a mainly relaxing effect.

## FEMINIZED CBD

Feminized phenotype rich in CBD thanks to the crossing with one of our varieties with the highest CBD content. A mainly Indica variety focused on a medicinal use. Like its feminized version, it is a medium-sized plant with a sweet taste. It differs from this one because of its physical effect, which is much softer. Productive plant of large and thick buds, also somewhat less crystalline than the feminized version.

**INDOOR:** 55 days +500gr\*

## AUTO CBD

Autoflowering phenotype of last generation CBD, crossed with a feminized clone high in CBD. It is a variety focused on a therapeutic use, with a ratio 1/2. This medium-sized plant can exceed 65 cm in height, it's compact and its buds are long and thick, with a sweet flavour, although less crystalline than its feminized version. Indoors, we recommend that you cultivate a cycle of 18 hours throughout the crop.

# SUPER HASH

**FEMINIZED VERSION**      **INDICA 90%**

Feminized phenotype of the crossing of Hash Plant with Mr. Nice Hash Plant x G13. It is a strain that retains a delicious tropical flavour that is a bit acid. In its vegetative state it has a strong and rapid growth and its short flowering makes it perfect for growers looking for large productions in a short time. Variety of easy cultivation, of big size for being an Indica giving excellent results, since the flowers that it produces are long, compact and very crystalline with a touch of Hash flavour. Ideal for extractions.

**INDOOR:** 55 days +550gr\*      1u. 7€      **THC: 19%**

## AUTO VERSION

Autoflowering phenotype of last generation Super Hash and as in its feminized version it retains many of its virtues in growth and performance. This autoflowering variety can reach a large size of over 70 cm, provided that the correct environmental conditions are met. It has a fruity taste and smell with a slight touch of Hash. The buds it produces are long and thick and it gives very good results both indoors and outdoors.

**INDOOR:** 65 days +400gr\*      1u. 6€      **THC: 15%**

# ALPUJARREÑA

**FEMINIZED VERSION**      **INDICA 90%**

Feminized phenotype of this autochthonous variety of the Sierra Granada. It is a mainly Indica plant, with an early flowering period of 50 to 55 days. This genetics has been cultivated at more than 1000 meters of altitude so it is strong and resistant to extreme conditions, always within a natural environmental logic. If exposed to low temperatures, it may acquire a purple tone without becoming part of the Purple family. With a sweet aroma and a very good taste, it has a relaxing non-cerebral physical effect.

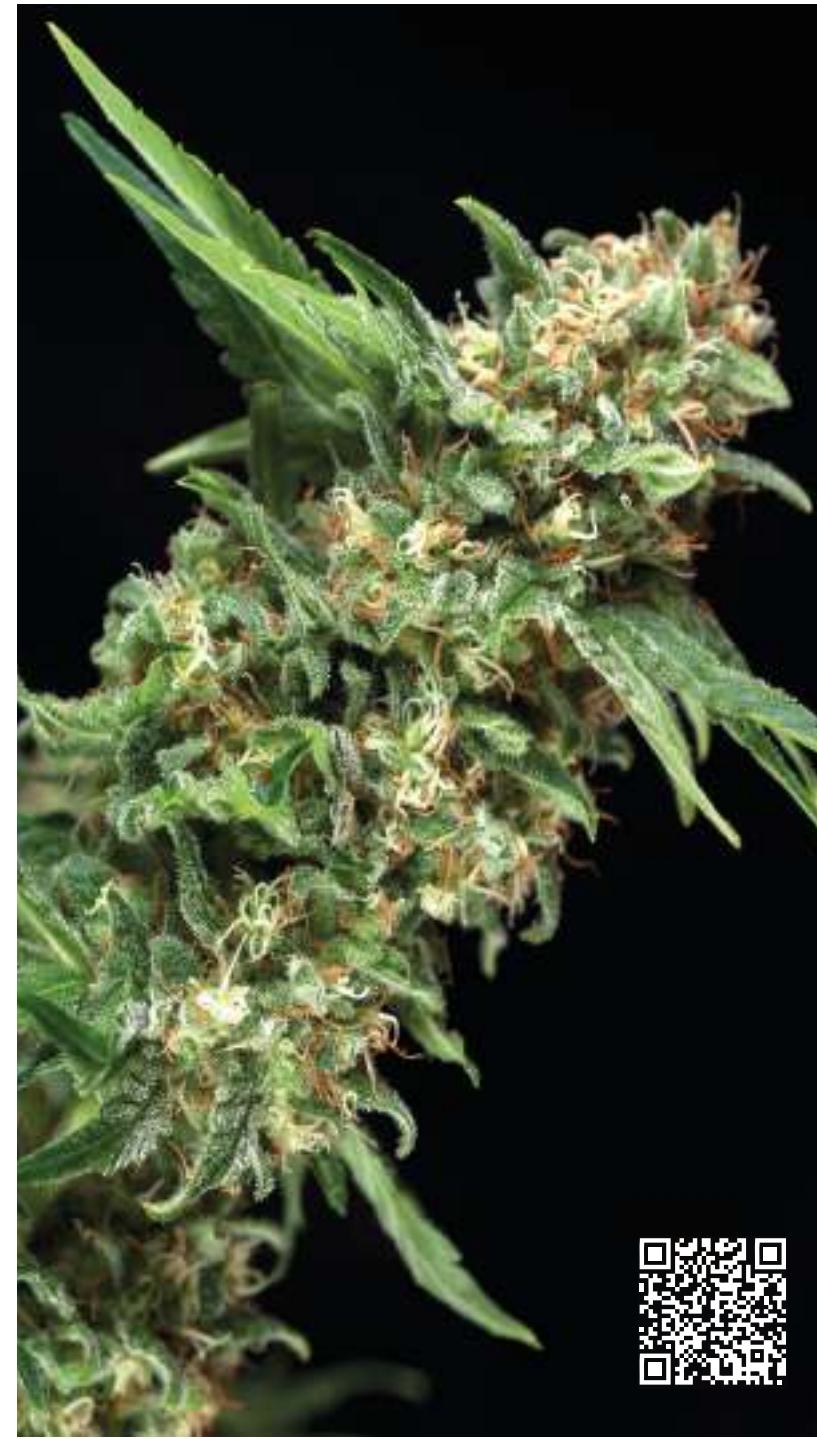

**INDOOR:** 55 days +550gr\*      1u. 7€      **THC: 16%**  
**OUT:** 1/4 Sep. 0,5-1 kg/p.      3u. 18€      **CBD: <1%**  
5u. 30€  
50u. 250€  
100u. 400€

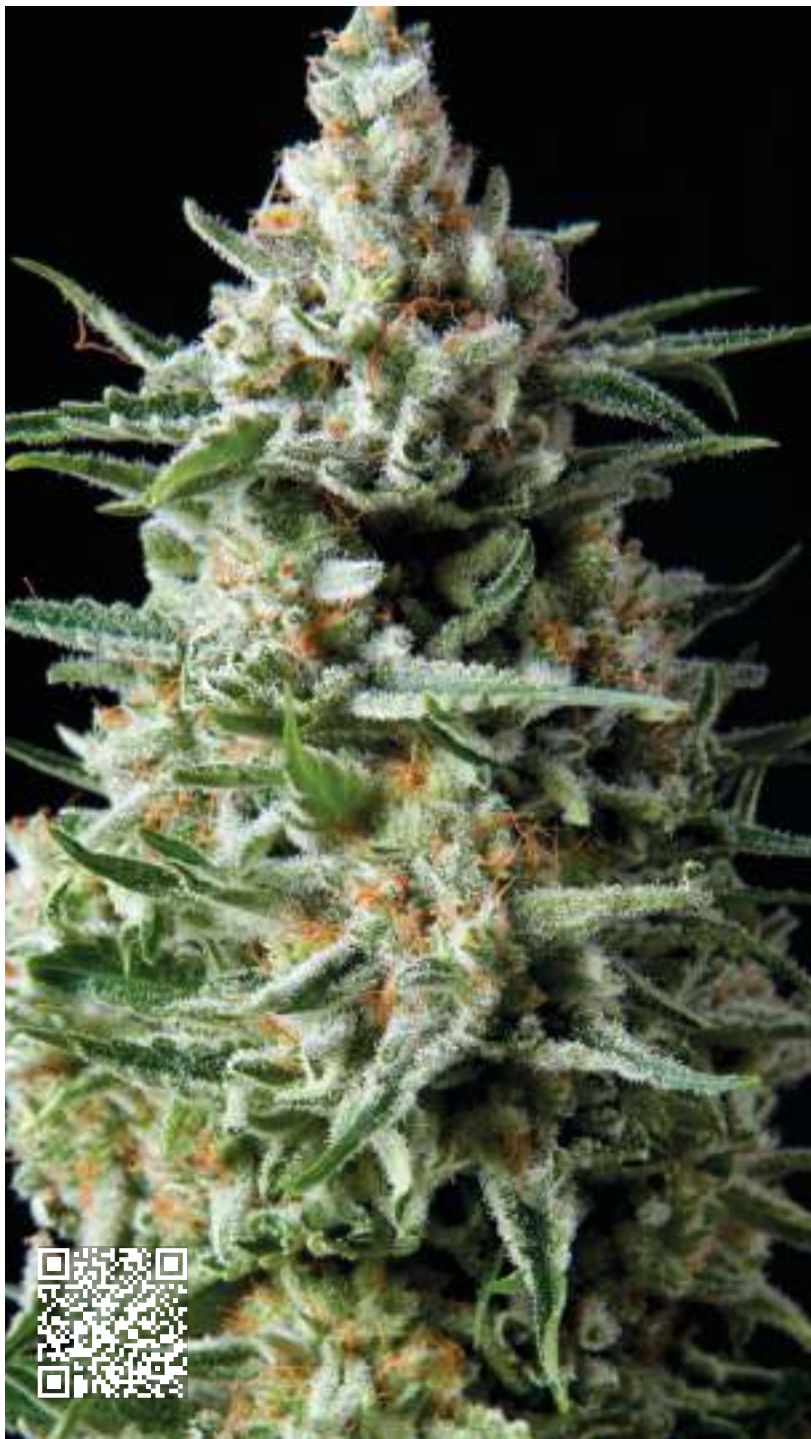

## AUTO VERSION

Last generation of the autoflowering phenotype of Alpujarreña. As its feminized version it retains almost all its qualities. It has the sweet flavour and a strong aroma typical of an Indica. Outdoors it can reach more than 80 cm in height, as long as it's planted at the moment when there is more sun. Inside we recommend 20 plants per square, which can exceed 1.50 m in height, and keep them at 18 hours all the time.

**INDOOR:** 50-55 days +450gr\*      1u. 6€      **THC: 14%**

# ANESTHESIA

FEMINIZED VERSION INDICA 90%

Feminized phenotype of this exceptional hybrid born from the crossing of Northern Light and Black Domina, carefully selected to achieve this impressive genetics. It has all the characteristics of a large Indica, a fast flowering and a great production. Very indicated to have as a mother for its growth characteristics. It is a very compact and robust plant with long, thick flowers full of dark green crystals. It has a sweet flavour with an acid touch at the end and a strong and intense smell. Its effect is relaxing and pleasant, very physical.

## AUTO VERSION

Autoflowering phenotype of Anesthesia. This strain is a compact variety of medium size with ramifications that are very close together and it differs from its feminized version by having a lighter colour. It produces thick and crystalline flowers and it has a mainly relaxing effect. It can exceed 70 cm in height outdoors in times of greater amount of sunlight, while indoors it may reach 1.60 m in a cycle of 18 hours.

# WEMBLEY

FEMINIZED VERSION INDICA 80%

Hybrid feminized phenotype, a predominantly Indica plant. This strain is the result of the crossing between AK-47 and Bubble Gum. It has a strong relaxing and lasting physical effect. It is the first variety that we selected from two regular F1. It has a tropical fresh fruit flavor, typical of Bubble Gum. This variety is medium-large, very branched and very productive. Its flowers are long, compact and crystalline with orange pistils that give a slightly different touch, and its leaves are light green.

**INDOOR:** 58 days +500gr\*

# SUPER OG KUSH

FEMINIZED VERSION

INDICA 80%

Feminized phenotype of Super OG Kush, fruit of the crossing with Hindu Kush. A variety that we have had for a long time but that we did not find a place in our catalogue because we felt that it lacked aroma. Now we have crossed it with a clone of an OG Kush that arrived to us from the United States. The result is a medium-large size plant, with a fast and vigorous growth and large dark green leaves. It gives large, thick and heavy flowers, it's a plant of great production and with an unmistakable flavor and aroma for lovers of Kush flavor.

**INDOOR:** 55 days +500gr\*

# BLUE PYRAMID

FEMINIZED VERSION

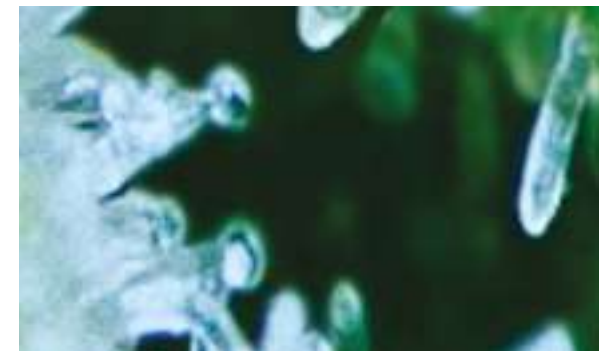

INDICA 80%

We have created this Blue Pyramid feminized phenotype from a selection of Blueberry crossed with Shishkaberry. Hybrid of an Indica appearance, with very compact and thick buds impregnated with crystals. With a strong and intense smell and a sweet flavour with a touch of exotic fruits. Its effect is intense and relaxing, producing a state of well-being. It is not advisable to endure high temperatures, as it is a quite sensitive to sudden changes in temperature. To appreciate its bluish tones, the temperature must be lowered in the last days of flowering.

**INDOOR:** 55 days +500gr\*

# SHARK

FEMINIZED VERSION INDICA 80%

Feminized phenotype, fruit of the crossing between Super Skunk and Northern Lights. Its sweet and intense taste gives the impression of eating delicious sweets. Shark is one of the most aromatic plants of our selection. It is a compact variety of thick and strong stems, with broad leaves and large flowers filled with resin that covers even the leaves closest to its flowers. Being a mainly Indica genetics it has a relaxing effect, it does not give crop problems and it always offers very good results.

## FEMINIZED CBD

Feminized phenotype of high CBD content; variety focused mainly on a medicinal use. Shark crossed with one of our varieties of high CBD content. As in its feminized version it is a medium-sized plant with a compact structure and a sweet taste, the difference with the non-automatic version is in its effect, softer and more bearable than in the feminized version. Productive plant of large and compact flowers. With a Ratio of 1:1.

**INDOOR:** 55 days +500gr\*

# FRESH CANDY

FEMINIZED VERSION INDICA 75%

We have obtained this feminized phenotype of Indica from a 2001 seed selection, the Sweet Tooth from Spice of Life. It is characterized by being robust and branched. Its flower is compact, hard and thick. This variety has a fresh caramel flavour and at the same time a sweet, intense, very rich taste. Its flowering can last from 55 to 60 days according to the preferences of each grower. Easy to grow, it adapts well to any type of terrain. Very suitable for beginners and people who do not want many obligations.

# KUKULKÁN

FEMINIZED VERSION

INDICA 70%

Feminized phenotype of this predominant Indica genetics, cross between Chronic and Black Domina. Medium sized plant with broad leaves and short, strong stems. We selected this variety for its high performance and its sweet and fresh taste with a soothing effect. It is an ideal plant for those who seek a high production in a short time. This all-terrain variety works well in any type of crop, either indoors or outdoors, in different latitudes and climates. It has a flowering time of 55 days and it is advisable to plant it in places where autumn arrives earlier.

# GALAXY

FEMINIZED VERSION

INDICA 70%

Feminized phenotype of this variety, a crossing of Afghani and Northern Light, it's a variety that we like because of its great performance in all systems and farming environments. It is a mainly Indica plant with a fast flowering. For this type of genetics it has a very fast and strong growth that gives heavy, thick and crystalline flowers, so it is ideal for getting a lot of production in a small space. Galaxy is very aromatic and its sweet flavour will remind lovers of Skunk a lot of that variety.

**INDOOR:** 55 days +550gr\*

# WHITE WIDOW

## FEMINIZED VERSION

INDICA 50%

## AUTO VERSION

Feminized phenotype of one of the most famous plants in the world. As Auto Northern Lights, White Widow is one of the most used varieties for making crosses to obtain feminized varieties, which shows the quality of its genetics. It never goes out of style, as it's very difficult to overcome something that is already well done. Very productive plant with compact flowers, structurally almost perfect. It doesn't create any problems for its cultivation in any system and it adapts to any climate and latitude. It has an easily identifiable aroma and flavour.

Autoflowering phenotype of the latest generation. Easy cultivation and excellent results outdoors. Variety for all types of cultivator, ideal for terraces, as it has compact and very ramified structure. Plant of sweet flavour and aroma of compact flowers. It can reach a size bigger than 70 cm outdoors. Indoors its size can exceed 1.60 m, we recommend more than 20 plants per square meter in a continuous cycle of 18 hours.

# TUTANKHAMON

FEMINIZED VERSION

SATIVA 60%

Feminized phenotype of this genetics that comes from a selection of AK-47 at the end of the last century and the beginning of this. One of our best genetics, compact and very branched phenotype, with a lot of very crystalline and spongy flowers. It does not stand out as much for its citrus flavour. It is a very productive and easy to grow plant for any user. Mainly Sativa, it has a very clear and lasting cerebral effect, not so physical. It has one of the highest percentages of THC in the market. In some THC tests it exceeded 30%.

**INDOOR:** 60 days +500gr\*

# NEW YORK CITY

FEMINIZED VERSION

SATIVA 70%

Feminized phenotype of this mainly Sativa variety, a very popular one among growers. It has a distinctive lemon citrus flavour. Its flower is not voluminous but spongy, full of crystals and at the same time very heavy. Very resistant to fungi. Although Sativas do not have a very long flowering, it's a very good genetics to grow in any condition and culture environment, especially in hydroponic systems. Outdoors it is usually harvested at the end of October. Its effect is cerebral and clean that keeps you active at all times.

# KRYPTONITE

FEMINIZED VERSION

SATIVA 80%

Feminized phenotype obtained thanks to the farmers of the mountains of Granada. We have crossed our varieties to look for a Sativa plant with a more intense effect. It is a medium-sized plant, with long and thin buds, but very compact and heavy. The colour of its leaves is intense green, which becomes clear as the flowering progresses. Regarding the flavour, it has an acid touch of Haze very special and different from the usual, due to the crossing with the Yumbolt. It is possibly one of the fastest Sativas in the world regarding flowering time.

# NEFERTITI

FEMINIZED VERSION

SATIVA 80%

This feminized phenotype, crossing of Black Widow and White Widow is peculiar for its powerful growth, more in height and less branched. It is a Sativa with a reasonable flowering period. Its leaves are completely Indica in the vegetative state and change to Sativa, fine and elongated when it blooms. It has a slight touch of Haze flavour that ends up being sweet. It has won several prizes, the first prize in Hydroponics 2007 under the name of "Black Hemp", the second one in the Cup of Catalonia in 2008 and the third of hashish in the Cup of Catalonia 2010.

# LENNON

FEMINIZED VERSION

SATIVA 80%

Selection of Jack Herer crossed with another pure Haze. Extremely strong Sativa hybrid, very psychoactive. It may give you dizziness and make your body feel heavy. It has a citrus flavor similar to lime, with an aroma of incense. It is a very productive plant and its buds are not very dense, due to its Haze genetics. The feminized version is a bit more complex in nutrition; we recommend substrates very low in nitrogen and that are not very fertilized. To avoid risks in growth and flowering, we also recommend a 6.5 PH.

\*Import, possession and traffic of hemp seeds is not subject to regulation according to the Single convention of Narcotic Drugs signed in Vienna in 1961, which expressly excludes cannabis seeds from the narcotic substances subject to international supervision. At present, regulation and legislation related to hemp seeds undergo severe variations from one country to another. In several countries, including Spain, Italy, The Netherlands, United Kingdom, Ireland, Austria, Poland, Canada, Japan and Switzerland, seeds trade is allowed. Nevertheless, possession and cultivation of hemp seeds is illegal and expressly forbidden in some other countries, even with medical purposes. Therefore, Pyramid Seeds kindly asks you to get related legal information according to your country. Pyramid Seeds markets hemp seeds and other related products that are absolutely legal in Spain, but always considering law-abiding customers. Spanish legislation does not forbid commercial trade of hemp seeds within the country. However, Spanish law punishes as public health offence, cultivation of cannabis plants for sale or traffic purposes. We sell and deliver our seeds under the condition that they will not be used for any purpose other than those specified in local law. Pyramid Seeds does not wish to encourage anyone to break the law, therefore, customers are responsible for their future actions. It is illegal to distribute Pyramid Seeds in those countries where the possession or traffic of cannabis seeds is illegal (USA, Australia, Norway, Andorra, Germany, etc.). There is scientific evidence that proves the medicinal properties of cannabis to relieve pain of ill people. A legal format of patented cannabis administration, as a sublingual spray, is pending of approval in a number of countries. It is expressly forbidden to sell Pyramid seeds to people under 18.
