SUMMER SQUASH

Black Coral F1

Black Coral F1

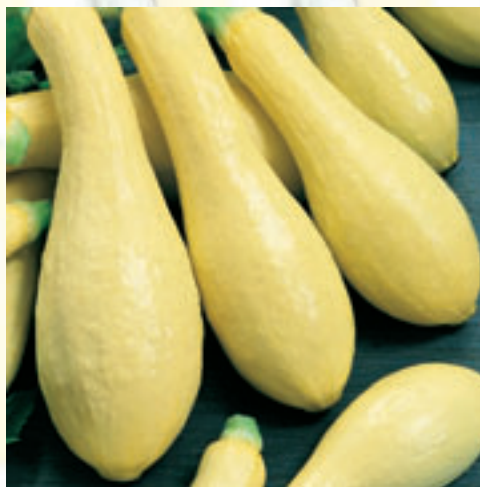

Is a dark black zucchini hybrid with a glossy skin and heavy yield. Black Coral F1 has a very high percentage of number one fancy fruit plus excellent mildew tolerance on an open bush habit for ease in picking.

49er F1

49er F1

50 days, upright open plants, glossy golden yellow fruits measuring 7-8 inches long. The creamy-white flesh has excellent flavor, productive yields, marketable as baby squash or full size fruits.

Amberpic F1

Amberpic F1

What would a crookneck be without its straightneck partner. Amberpic is our new straightneck hybrid. The fruit are smooth with a glossy yellow color. Very early maturing with a long fruiting period. Fruit store and package well.

Garden Spineless F1

Garden Spineless F1

Garden Spineless is an excellent home garden zucchini. It produces long cylindrical fruit on a scratchless open plant for easy pickings. The dark green flecked fruit show up well on the open plant in 53 days.

Dark Jasper F1

Jasper F1

Early maturing in 45 days. Vigorous bush plants, straight smooth dark-green mottled fruits, best at 6-8 inches, pale greenish-white firm flesh, prolific, heavy yields.

Emperors Jade F1

Emperors Jade F1

Matures in 45 days, Upright open plants, cylindrical glossy dark green fruits are 7 to 8 inches long by 2 inch diameter, very tender firm creamy-white flesh, fine flavor, very early and productive.

Greyzinni F1

Greyzinni F1

Forty days to maturity. Oblong fruits, pale-green to cream-white, with faint green stripes, smaller at blossom end. Creamy white firm fleshed fruit are best when picked at four to six inches long, good for fresh market.

Ronde de Nice

Ronde de Nice

Forty five days to maturity. Open bush plant habit with mottled green deeply cut leaves. Fruit are two inches in diameter, greenish grey globes, small blossom scar, creamy yellow solid flesh, productive, for home gardens. Exceptional flavored French variety, delicate skin bruises easily, can be picked at one inch or stuffed at four inches.

Straito D' Italia

Straito D' Italia

Fifty days to maturity. Bush habit, long cylindrical zucchinis, are dark green with light green stripes, edible fruit in forty days, very firm greenish white flesh, ten to twelve inch young fruits, good fresh market strain for specialty Italian markets.

Greyzucchini F1

Greyzucchini F1

Forty five days to maturity. Medium green skin mottled and flecked with grey, cylindrical, tapers slightly smaller at the stem end, pick at six to eight inches, small seeds, open semi-spiny bush plant, heavy early yields, no concentrated fruit set so Greyzucchini F1 makes a terrific home garden variety.

Jasper F1

Jasper F1

Forty days to maturity. Early vigorous bush plants, straight smooth dark-green mottled fruits, best at 6-8 inches, pale greenish-white firm flesh, very prolific, heavy yields, strong crisp zucchini flavor. Jasper performs well in the North Eastern USA.

Summer Melody

Summer Melody

This component blend of Golden Zucchini, Black Beauty, Grey Zucchini, and White Bush Scallop is both attractive and economical. Since it is a mixture of open pollinated varieties it can be priced for any seed market. The variety selection lets gardeners have popular varieties from many different types of summer squash.

Lungo Blanco

Lungo Blanco

Fifty days to maturity. Bush plant produces seven to eight inch long white fruits with sweet flavor. Skin is very tender and scars easily. An Egyptian specialty, and an excellent culinary choice for home gardeners and specialty markets.

Lunar Eclipse F1

Lunar Eclipse F1

Forty days to maturity. Pale green pie shaped fruits with scalloped edges. The light green, fine textured flesh is two inches deep and four inches wide, with small blossom scar. Plants are semi open bush, heavy yielding, an improved Patty Pan type, excellent quality yields than other bush scallops.

Super Clarinette F1

Super Clarinette F1

Summer Squash variety which is very popular in the Middle East, sweet fruits with excellent flavor. Fruits are pale green to white and should be picked early from seven to eight inches or less. Plants are capable of with standing harsh climatic conditions. Matures in forty days.

Juane et Vert

Juane et Vert

Fifty five days to maturity. Beautiful French heirloom, with scalloped fruit, cream - ivory skin with contrasting green radial streaking, very flavorful summer squash. Juane de Vert can also be baked at full hard shell maturity as a winter squash.

Scallop Blend

Scallop Blend

A colorful blend of Total Eclipse, Sunbeam, Lunar Eclipse, Partial Eclipse and Moonbeam. These five hybrid scallops make a perfect picture having all colors represented. Every gardener will love to grow this collection of tasty and beautiful summer squash.

Partial Eclipse F1

Partial Eclipse F1

Open bush plant habit for easy picking. Lovely white scalloped fruit have contrasting green radial stripes. Flesh is firm and very tasty. Dark stripes develop when fruits are over four inches in diameter. Partial Eclipse can also be grown to full maturity and eaten or displayed like other winter squash.

Golden Zebra F1

Golden Zebra F1

50 days to maturity, Bush spineless plants, bright golden yellow cylindrical fruits with orange strips, medium long and slender, excellent flavor. Productive with unique coloring.

Summerpac F1

Summerpac F1

A hybrid crookneck which is very smooth with no warts. The classic crook shape is just what the market demands with high yields. The almost spineless bush habit reduces the fruit from being scratched. Summerpac was bred to withstand the heat very well.

Clarintte F1

Clarintte F1

Early maturing at 45 days. Clarinette is a high yielding pale green to white bulbous squash for the international and ethnic markets. Plants have an open bush habit. Excellent mild flavorful summer squash.

Total Eclipse F1

Total Eclipse F1

Prolific dark green, pie shaped scalloped fruit, fine grained fine flavored white flesh. Lunar Eclipse grown with other colors makes a nice baby scallop mixture. 49 days to maturity.

Moonbeam F1

Moonbeam F1

45 days to maturity, Pale green to white pie shaped fruits with scalloped edges, pale green fine textured flesh. Excellent packed as baby squash, small blossom scar, semi open bush, and heavy yields.

Sunbeam F1

Sunbeam F1

47 days to maturity, Vigorous bush plants, golden yellow scalloped fruit, distinctive flavor, some studies show that yellow scallops are less attractive to squash bugs. Some green on the blossom end
