

JUMBO Balloon Kit Assembly

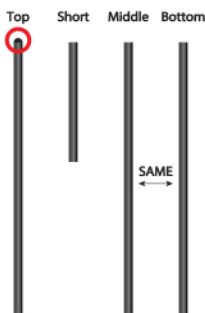

Please inflate all balloons within 30 days of purchase to comply with Warranty Guidelines.

BALLOON DIAGRAM & PARTS

Installation Poles
Pole with cap for pocket
Pole with snap button for bracket

Bottom Bracket

Pole Connectors

10" Band Clamp

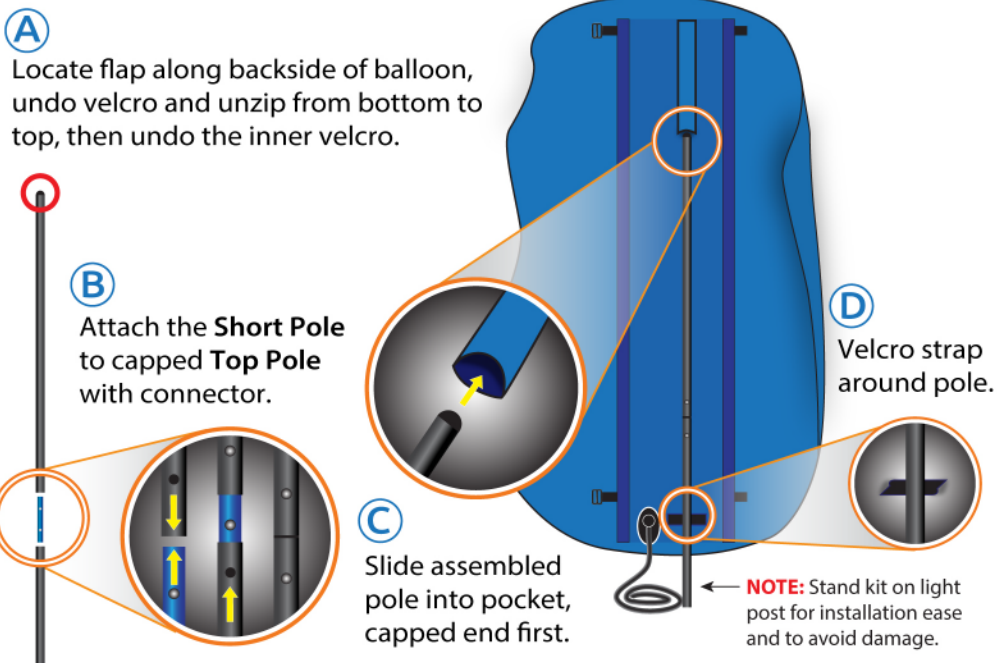

Pinch Clamp

NOTE: Poles must be used in order shown.

1.1

INITIAL BALLOON & PARTS ASSEMBLY

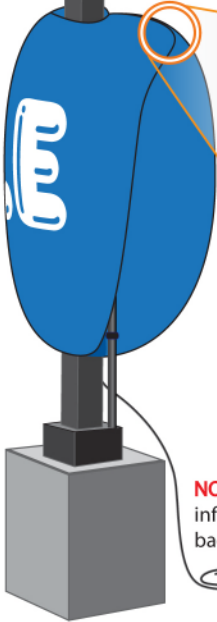

1.2

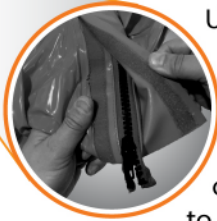

BALLOON/LIGHT POLE SETUP

IMPORTANT

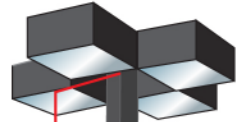

MAKE SURE STRAPS ARE ON THE OPPOSITE SIDE OF DESIRED GRAPHIC LOCATION.

NOTE: Remove inflation tube from bag before raising.

Use installation pole to stabilize unit and attach to light pole by wrapping inner sleeve around pole and sealing velcro. Fasten the upper and lower straps. Zip and seal outer velcro 3/4 of the way, then use a pole connector to add the **Middle Pole**. Zip and velcro the final 1/4 around pole, avoiding wrinkles in velcro flap for better look and shape.

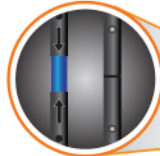

MIN. 4' distance from lamp fixture

1.3

RAISING BALLOON/SECURING UNIT

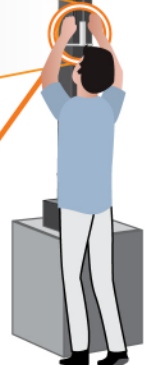

Raise balloon to desired height by adding the final **Bottom Pole**. Rest **Bottom Pole** on cement of light pole, attach **Bottom Bracket** with **Band Clamp** and tighten to secure **Bottom Bracket** to the face of the light pole, not on the corner of the light pole. Place the pole assembly in the bracket.

NOTE: Bracket and light pole shown white for demonstration purposes.

TIPS:

Make sure balloon does not rotate when raising. Secure inflation tube between bracket and light pole.

1.4

COMPLETING THE JUMBO BALLOON KIT

A

Remove plug from tube (DO NOT LOSE) and begin inflation. Make sure balloon does not rotate.

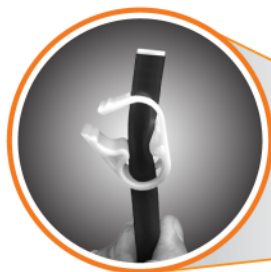

NOTE:

We recommend using an air compressor with 6' air hose for inflation.

B

Once the balloon is inflated, tighten slack in tube and seal with the pinch clamp.

C

Finally, cut excess tube and press plug into the tube to prevent any leaking.

TIP: We recommend adding air to balloon after a 3hr stretch period.

NOTE: Bracket shown white for demonstration purposes.
