# A step-by-step guide to PRN3006Lv2 firmware update

Step 1. Download the latest version of the firmware for your device under the downloads tab, scroll down to the bottom of the webpage.

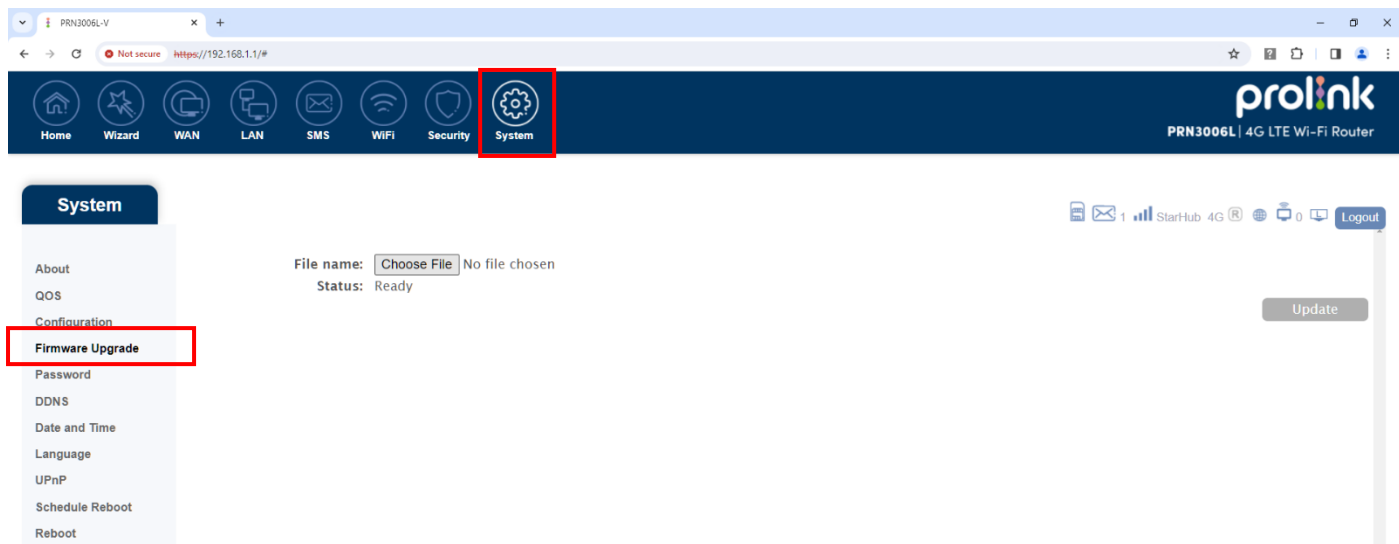

Step 2. Enter URL http://192.168.1.1 (please include http://) to the web browser. Enter your login username and password on the login page and then click [Login].
The username and password are printed on the label pasted at the base of the unit.
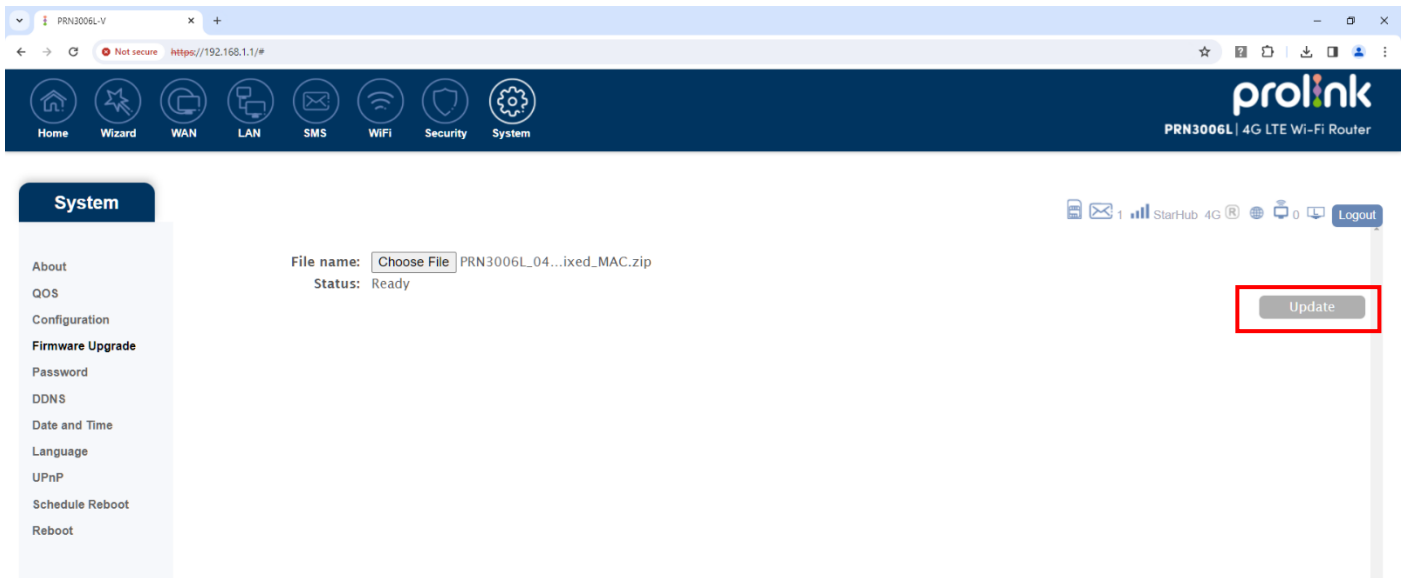

Step 3. Find **System** on top panel and click on **Firmware Upgrade** on the sidebar.

Step 4. Click on [Choose File] and choose the firmware file you want to upload and click [Open] button to upload firmware.

Step 5. Click [Update] to proceed.

Note: Do not interrupt the update process and it is recommended to use a wired connection from the PC/laptop to do the update.

Step 6. Once the update is completed, reset the unit by using a pin to press and hold the reset button (located at the base of the unit) for 5 to 7 seconds (while the unit is powered on) then release. You can reconfigure the unit (i.e., changing of SSID and wireless password) once the unit restarted.
