

Breathe clean & healthy air, all day, every day !

With air quality becoming a serious issue clean air is today very important for all of us. This is important for you and your family and even more for people with allergies and respiratory diseases.

Glen Air Purifiers are specially designed to bring clean & healthy air to all interiors. These improve the quality of air and keep dust, bacteria, viruses, pollen & allergies away. Sleek and smart in their looks, Glen air purifiers not only purify the air effectively with their unique 5 Step Purification system but also add style and glamour to the interiors. In addition Glen purifiers come with a Built-in Ionizer that produces millions of negative ions to promote elimination of airborne allergens and germs.

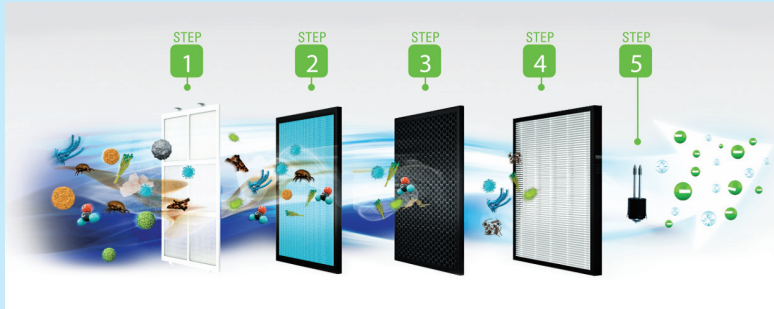

With advanced features like air quality indicator, filter replacement indicator, auto mode and night mode functions and their convenient portability Glen air purifiers simply take away all your air quality related worries.

NOW BREATHE CLEAN AND LIVE HEALTHY !

Air Purifier

GLEN

5 Step Air Purification

- 1 Micro mesh Pre-Filter** effectively removes fiber particulate matter bigger than 0.28 mm with hair, dandruff, coarse grains & fine dust blocking rate over 99.90%.
- 2 Cold Catalyst Filter** efficiently removes pollen, dust, bacteria, cigarette smoke, harmful airborne chemicals from carpeting, flooring and household cleaners and decomposes the harmful gases like formaldehyde, ammonia, benzene etc.
- 3 Activated carbon:** 3mm coconut shell active carbons have high degree of micro porosity, and the honeycomb design increases the efficiency of gas adsorption. It removes 99% of oil vapours, odours, TOVC and other hydrocarbons.
- 4 True HEPA** removes up to 99.97% of above 0.3 micron diameter particulate, such as fine dusts, haze and smoke particulate, pet dander, mold spores, pollen, some bacteria and viruses.
- 5 Built-in Ionizer** produces millions of negative ions to promote elimination of airborne allergens and germs.

HIGHLIGHTS

Air Quality Indication

The colour of the Light Indicator changes with the quality of the air inside the room. The air quality light indicator automatically illuminates when the appliance is switched on.

LIGHT INDICATOR

- ➕ BLUE
- ➕ GREEN
- ➕ PURPLE
- ➕ RED

AIR QUALITY

- EXCELLENT
- GOOD
- MODERATE
- BAD

Filter Replacement Indicator

Once the filters get choked the air purifier indicates that it is time for cleaning and replacement of filters.

The filter replacement light glows and the speed lights start flashing.

The micro mesh pre-filter is the first point that traps the dust and is washable, all the other filters must be replaced when choked.

Auto Mode

The built-in air quality sensor measures the ambient air quality and automatically selects the most appropriate speed setting to guarantee the best possible air quality in your room.

When the air is clean, the appliance starts running at a very slow speed and is almost silent. When the air quality deteriorates, the fan speed of the appliance increases and the noise level goes up.

Night Mode

The appliance works in harmony with its surroundings. In auto mode, the appliance automatically switches to night mode when the room in which it is operating becomes dark. The lights of the appliance go out, the fan speed and noise level are reduced and the energy consumption is minimized. If the room becomes bright again for 5 minutes or longer the appliance returns to normal operation.

Fan Speed

If not using the auto mode you can select from 3 speed levels. Select boost power if you need an extra strong airflow when the air in the room is very dirty.

AP 6032 45 W
Maximum room coverage area
590-700* Sq. Ft.

AP 6031 45 W
