

INSTRUCTIONS FOR THE RIGHT USE OF BELT CUTTER

- Loosen the screw number 1 counterclockwise
- There is a plank inside. There are two different screws on the left and on the right of the screw number 1 and they are useful as track for the blade, which has to be put into the specific tracks.
- Lean the blade on the left, then clamp the screw number 1 and the cutter is ready to be used.
- The flame nicks of the cutter are useful to move it each time you have to sharpen it.
- If the screw number 2 is loosened, it is possible to move the carriage according to the width you want to cut the belt.
- The wing nut is useful to raise or lower the roller according to the thickness of the material.
