Substance Reduction Test Report

Detailed performance and contaminant reduction data for
the BOROUX foundation.TM filter.

Filter Model	BOROUX foundation. TM filter
Report Number	WFT-01-01
Test Type	Substance Reduction Test
Version	1.6
Report Date	February 29, 2024
Conducted For	BOROUX TM , 1981 Aspen Circle, Pueblo, CO 81006
Conducted By	IAPMO R&T [®] Lab (NJ)

Testing Methodology and Quality Standards Overview

1. The test results presented were obtained using a single filter. For systems utilizing two filters, the capacity may be doubled.
2. The testing was carried out under controlled conditions in an ISO/IEC 17025:2017 accredited laboratory.
3. Influent Challenge Concentration Before Filtration and Maximum Allowable Effluent Concentration provided in the table below adhere to the specifications defined in the NSF/ANSI Standards 42, 53, and 401, except where those standards do not specify parameters for the listed substances.
4. The testing of Volatile Organic Compounds (VOCs) listed below utilized Chloroform as a surrogate chemical.
5. The results detailed in this report are intended solely for informational purposes and do not infer certification by any standard. The BOROUX foundation.™ filter has not been certified by NSF/ANSI or any other standard as of the publication date of this information.
6. Testing is continuing. Results will be updated accordingly.
