One ampoule / vial of Nebido (corresponding to 1000 mg testosterone undecanoate) is injected every 10 to 14 weeks. Injections with this frequency are capable of maintaining sufficient testosterone levels and

do not lead to accumulation. Your doctor will inject Nebido (1 ampoule / vial) very slowly into a muscle. He/she will give you the injections every 10 to 14 weeks. This is enough to maintain sufficient testosterone levels without leading to a build-up of testosterone in the blood. Nebido is strictly for intramuscular injection.

Los plasmocitos son elementos linfoides derivados de Linfocitos B maduros estimulados antigenicamente con la coaccion de linfocitos T Cd4 . Estructuralmente las celulas plasmaticas muestran moderada cantidad de citoplasma , el cual puede evidenciar zonas de clarificacion correspondiente a amplio aparatos de Golgi y RER . Los nucleos redondeados a ovaes se caracterizan por estar lateralizados ; siendo su morfologia utilizadas como punto de comparacion en neoplasias en las cuales las celulas tumorales adoptan este patron " plasmocitoide " . Con respecto a la heterocromatina suele presentarse en grumos gruesos con una tendencia a una distribucion sub membrana nuclear lo que ha dado lugar al termino " cromatina en rueda de carro " .

Maintaining your Nebido levels during treatment The injection interval should always be within the recommended range of 10 to 14 weeks. Your doctor will measure your testosterone levels regularly at the end of an injection interval to make sure it is at the right level. If the level is too low, your doctor may decide to give you injections more ...
