

ERC BackPack case

Spiracle Technology ERC BackPack case

Spiracle Technology's ERC BackPack case is built for harsh rugged use in the emergency medical environment. The ERC BackPack is designed to provide the rescuer/operator the ability to carry the unit either via the grab and run handle, the over the shoulder sling strap, or via the backpack shoulder straps.

The ERC BackPack case allows storage and carrying of the USA cylinder sizes: D-size w/toggle (T10217), Jumbo-D w/toggle (T10218), DD-Lite w/toggle (T10205), EE-Lite w/toggle (T10210). The ERC BackPack case comes with two (2) foam inserts inside the bottom of the case. The inserts allow the operator to use (or not use) the foam spacers as needed for the size of cylinder being used.

The unit is constructed with high thread count Denier polyester material. The bottom surface of the ERC BackPack is made with durable shelterite type material, which withstands the harsh rugged use in the EMS field. The ERC BackPack has four side pockets, and one large front pocket that runs the length of the case base allowing the operator to store and carry a large selection of medical products.
