WARNING: Read and thoroughly understand all instructions and safety information before assembling or operating this post hole digger Failure to do so may cause serious injury or death. Do not allow anyone to operate this post hole digger who has not read this manual. As with all power equipment a post hole digger can be dangerous if assembled or used improperly. Do not operate this post hole digger if you have doubts or questions concerning safe operation. Call our customer service department at 1-800-525-8322 to address these concerns.

Si no entiende ingles, se prefiere que busque alguien que interprete las instrucciones para usted.

INTENDED USE

This product is designed to dig holes in the soil when attached to the 3-point linkage system and power-take-off of a tractor. It is **not** intended for any other use. Using the product for anything other than digging holes could result in serious injury or death.

PERSONAL PROTECTIVE EQUIPMENT

ALWAYS use appropriate personal protective equipment such as protective eyewear and safety shoes when operating this log splitter.

NEVER wear loose clothing or jewelry that could become entangled in the auger or driveline.

SAFETY DECALS

ALWAYS replace missing or defaced decals. Reorder from SpeeCo, Inc., 15000 W. 44th Ave., Golden, CO 80403 or call 1-800-525-8322.

PART NUMBER: DL5202010

LOCATION: TOP OF BOOM ON GEAR BOX END

A DANGER

TO PREVENT SERIOUS INJURY OR DEATH:

Si no entiende ingles, se prefiere que busque a alguien que interprete las instrucciones para usted.

- Read and understand owner's manual before operating.
- Operate only from the tractor seat.
- Stay away from rotating parts. Keep others away.
- Do not dig around underground utility lines without checking with authorities.

PART NUMBER: DL52020200

LOCATION: UPPER RIGHT SIDE OF BOOM

A DANGER

TO PREVENT SERIOUS INJURY OR DEATH:

- Contact dealer, make sure your machine has all current safety guards and shields in place.
- Do not operate without all guards and shields in place.
- Do not operate when auger is higher than 12 inches above ground level. Doing so may cause driveline to bind, resulting in equipment damage or operator injury.
- Stop auger rotation before maneuvering, relocating or transporting.

PART NUMBER: DL52020300

LOCATION: UPPER LEFT SIDE OF BOOM

AND

PTO DRIVE SHAFT SHIELD

A DANGER

Rotating Driveline contact can cause death **KEEP AWAY!**

DO NOT OPERATE WITHOUT-

- ALL DRIVELINE GUARDS, TRACTOR AND EQUIPMENT SHIELDS IN PLACE
- DRIVELINES SECURELY ATTACHED AT BOTH ENDS
- DRIVELINE GUARDS THAT TURN FREELY ON DRIVELINE

PART NUMBER: DL51019200 LOCATION: PTO DRIVE SHAFT

SHIELD

ATTENTION

540 RPM MAXIMUM
PTO OPERATING SPEED

PART NUMBER: DL51011900 LOCATION: PTO DRIVE SHAFT

SHIELD

DANGER

DO NOT ATTACH THIS IMPLEMENT OR ATTEMPT TO OPERATE UNTIL YOU HAVE READ AND UNDERSTOOD ALL INSTRUCTIONS IN THE OWNER'S MANUAL. IF AN OWNER'S MANUAL IS NOT AVAILABLE CONTACT SPECIAL PRODUCTS CO., 15000 W. 44th AVE., GOLDEN, CO 80403-1824 PHONE 303-279-5544

PART NUMBER: DL52020400

LOCATION: BOTH SIDES OF GEAR BOX SHIELD

PART NUMBER: DL52020500 LOCATION: TOP END OF AUGER TUBE

NOTE: If the output shaft guard mentioned in the above decal is missing, you may order a replacement by calling us at 1-800-525-8322.

GENERAL SAFETY AND PREPARATION

ALWAYS make sure that anyone else who operates this post hole digger has read and understood the contents of the owner's manual and all safety decals on the product.

ALWAYS be certain that all members of the work party are familiar with the operation of the digger and the hazards associated with it.

ALWAYS check with authorities for underground utilities before digging a hole. Serious injury or death could result from contact with gas or electric lines.

ALWAYS check the tractor owner's manual for instructions on operation, attachment of 3-point equipment and safety.

ALWAYS make sure that all safety shields are in place and tightened down. Do not operate this post hole digger if any shields are missing. Contact SpeeCo, Inc. at 1-800-525-8322 for replacement part(s).

ALWAYS make sure that the auger point and cutting edges are intact and in good working order before using this digger.

OPERATING SAFETY

ALWAYS operate this post hole digger from the tractor seat. Only one person should operate the digger.

NEVER attach the post hole digger with the tractor engine running.

NEVER operate the post hole digger with anyone near or in contact with any part of the implement, PTO driveline or auger. Serious injury or death could result from entanglement with moving parts.

ALWAYS make sure that the tractor brake is set before digging a hole.

ALWAYS keep hands, feet and clothing away from power-driven parts during operation.

NEVER manually position the auger or manually force the auger into the ground.

ALWAYS make sure that the tractor engine is shut off and the PTO drive is disengaged before leaving the tractor seat.

NEVER move the tractor with the power-take-off in the ON position.

NEVER exceed 540 RPM PTO operating speed.

NEVER operate the post hole digger when the auger point is more than 6 in. above ground level. Operating the digger in elevated positions may cause the PTO driveline "U" joints to bind resulting in equipment damage and operator injury.

ALWAYS turn off the digger immediately if an immovable object is encountered to prevent damage to the gear box or driveshaft and possible injury. A shear bolt is provided but may become welded to the input shaft if the driveshaft is left running after being sheared.

REPAIR AND MAINTENANCE SAFETY

ALWAYS perform maintenance operations such as lubrication, adjustments or repairs on the post hole digger with the tractor engine off, the PTO drive disengaged and the auger point resting on the ground.

ALWAYS use the correct shear bolt (Grade 5).

NEVER use or replace the shear bolt with one that is longer than the one specified in the manual (5/16" x 2-1/2").

ASSEMBLY INSTRUCTIONS

IMPORTANT: The gear box is shipped without lubricant. Fill the top hole with EP 90 lubricant or the equivalent.

Fill until the lube appears at the side level check hole. Approximately two pints or two pounds of the lubricant is enough to lubricate the gears and bearings. A greater amount will not harm the

gear box. Do not fill to overflow point as this may damage the seals.

STEP 1: Be certain that the gear box has adequate lubrication. Check the oil level after every fifty hours

of use.

STEP 2: Attach the boom (1) to the top link mounting bracket on the tractor using a top link pin and a

lynch pin (not provided) through the hole at the bottom of the boom.

STEP 3: Connect the "A" frame (5) to the tractor's 3-point lift arms using the 7/8 in. pull pins with nut and

lockwasher (5A) as shown in the drawing. For category I tractors (lift arm spacing of 26 in.), use the pins in the inward position. For category II tractors (lift arm spacing of 32 in.) the pins should point outwards. Attach the "A" frame (5) to the boom (1) after selecting the desired hole

(for angle adjustment) using the "A" frame pin (6) and lynch pin (4).

STEP 4: Attach the gear box (10) to the boom (1) using the boom pin (2). When in place secure with

cotter pins (3). NOTE: Input shaft shield (9) and output shaft shield (26) are already attached

to the gear box.

STEP 5: Attach the auger (20, 21 or 22) to the output shaft on the bottom of the gear box (10) using the

1/2 in. hex cap screws (17), 1/2 in. lockwashers (18) and 1/2 in. hex nuts (19). Tighten the nuts.

STEP 6: Attach the driveline (13) to the gear box input shaft using the 5/16 in. grade 5 hex cap screw

(14), the 5/16 in. lockwasher (15) and the 5/16 in. NC hex nut (16). Tighten the hex nut. Insert the 1/4 in. x 3/8 in. set screw from the hardware kit in the hole on the yoke that aligns with the 3/16

in. groove on the gear box input shaft. Tighten.

ATTENTION: THE 5/16 IN. HEX CAP SCREW PROVIDES SHEAR PROTECTION. USE A GRADE 5

2-1/2" BOLT ONLY TO AVOID DAMAGE TO THE GEAR BOX OR AUGER.

IMPORTANT: The universal joint should be greased with a good grade chassis lube every week. At the

beginning of each season grease the sliding driveshaft members with a moly grease. All diggers are equipped with guick-detach universal joints on the power-take-off end for a

1-3/8 in. splined shaft.

STEP 7: Attach the tractor end of the driveline (13) to the tractor PTO shaft. Push in the spring-loaded pin

in the splined yoke (13E) and slip it on the splined PTO shaft of the tractor. Release the pin and push until it locks securely in place. It will be necessary to obtain a 1-1/8 in. to 1-3/8 in. sleeve

spline adapter if your tractor PTO shaft has a 1-1/8 in. spline.

STEP 8: Attach and secure both chains on the driveline to the boom (1).

STEP 9: Attach the handle (8) to the gear box (10) and secure with the 5/16 in. set screw (11). Tighten.

STEP 10: Check all nuts and bolts for tightness. Stabilizers should be kept tight to avoid side sway of the

digger.

NOTE: See illustration A for reference in assembling the digger and mounting it to the tractor.

Note that the boom angle can be adjusted on your tractor for proper digging and ground

clearance by moving the "A" frame to a different mounting hole as shown in illustration B.

NOTE: When the 7/8 in. diameter pull pins in the "A" frame are too small for the holes in the lift

arms, bushings should be used to obtain a proper fit

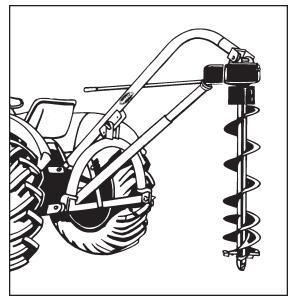

ILLUSTRATION B

OPERATING INSTRUCTIONS

WARNING: Read and thoroughly understand all instructions and safety information before operating this post hole digger Failure to do so may cause serious injury or death. Do not allow anyone to operate this post hole digger who has not read this manual.

- STEP 1: After mounting the digger to the tractor, lower the auger point slowly to the ground at the desired digging angle before engaging power.
- STEP 2: Engage the power-take-off and start digging at a slow speed, lowering the auger slowly as it begins to dig.
- STEP 3: Increase speed as the auger goes deeper. The type of soil will determine the proper auger speed. If the soil is extremely hard, it will generally improve operation to vary the speed of the auger at times.
- STEP 4: When the auger has reached the desired depth, spin it momentarily at a high speed to clear the hole of dirt. Reduce speed before withdrawing the auger from the hole.
- STEP 5: Disengage the power-take-off after withdrawing from the hole and move the tractor to the next hole location.

GENERAL MAINTENANCE

REFER TO ILLUSTRATION C

WARNING: Always perform maintenance operations with the tractor engine off, the PTO drive disengaged and the auger point resting on the ground.

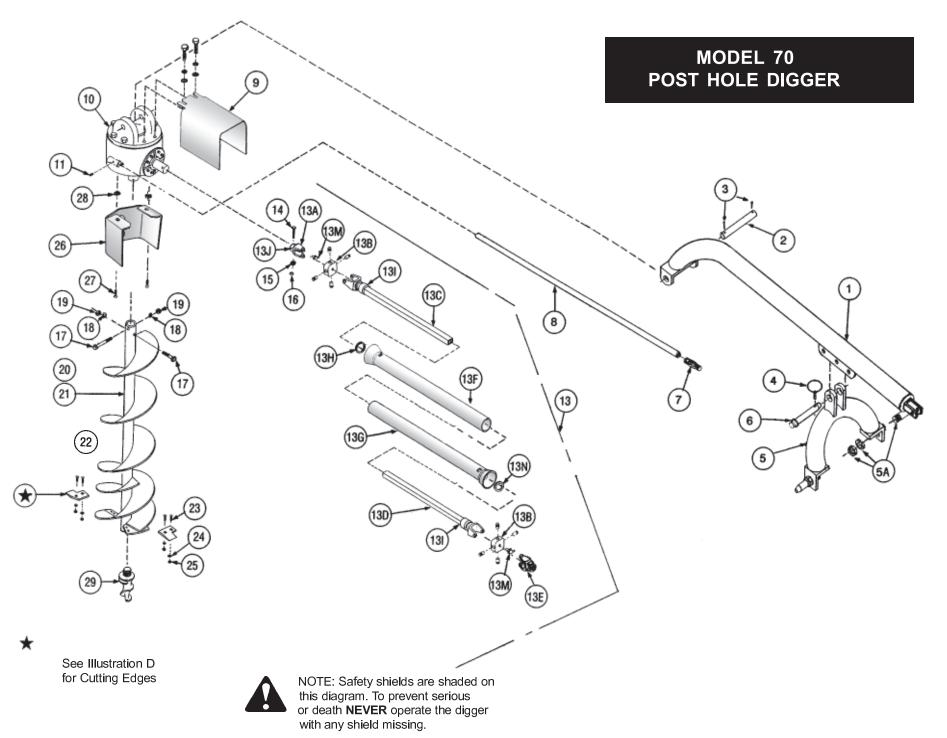

- 1. To remove the auger from the gear box output shaft, take out the two 1/2 in. x 3 in. hex cap screws (17).
- 2. To remove the driveshaft from the gear box input shaft, take out the shear pin bolt (14) and 1/4 in. set screw (13j).
- 3. To remove the auger control handle (8), loosen the 5/16 in. set screw (11) in the side of the gear box (10).
- 4. Check the oil level after every fifty hours of use. Use EP 90 lubricant and fill to oil level plug. All replacement lubricant should be of this type.
- 5. The universal joints should be greased with a good grade chassis lube every week. At the beginning of each season, grease the sliding driveshaft members with a moly grease.

ILLUSTRATION D

NOTE: It is important to replace the self-sharpening point on the auger when it shows signs of excessive wear. Generally, the digging life of the point will be greater than that of the inner cutting edge. The digging life of the inner cutting edge will be greater than that of the outer cutting edge since it covers fewer inches of digging circumference.

SPECIFICATIONS

Tractor Category 1 or 2

Gear Box Special alloy pinion gears and tapered roller bearings on both sides of each gear

Gears Heat-treated to Rockwell C30-40 to a depth of .030-.040

Driveline Equipped with quick-tach yoke to fit standard 6-spline PTO (completely shielded)

Cutting edges Beveled, high carbon steel, replaceable

Augers 6 in., 9 in. and 12 in. sizes available that all dig to a full depth of 45 in. Anti-auger

plates to prevent it from screwing into soft soils

Boom 2-7/8 in. O.D. high strength tubing

A-frame 2-7/8 in. high strength tubing

Safety shields On driveline, gear box "U" joint and gear box output shaft

Shear pin On input shaft to protect driveline, auger and gears. Replaceable.
