

These 316 stainless steel kill bar clips have been designed to improve the functionality and performance of the Perdix Spring Trap. The clip sits neatly in the kill bar groove to provide a smooth and hardened contact point with the trigger. They are easily and quickly fitted by hand as shown in the instructions below.

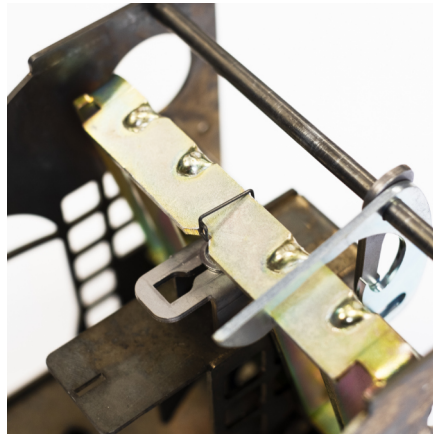

## Step 1

Bring the kill bar up into the safety position. Please double check the safety is engaged. Hook the clip around the back of the kill bar and place into position.

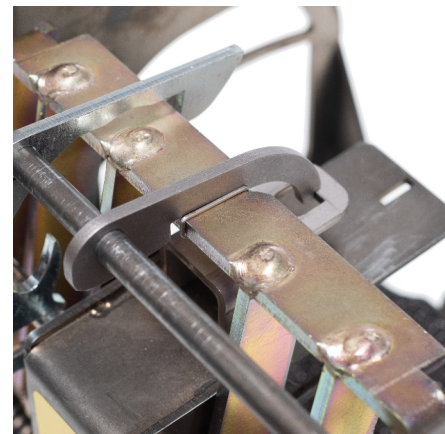

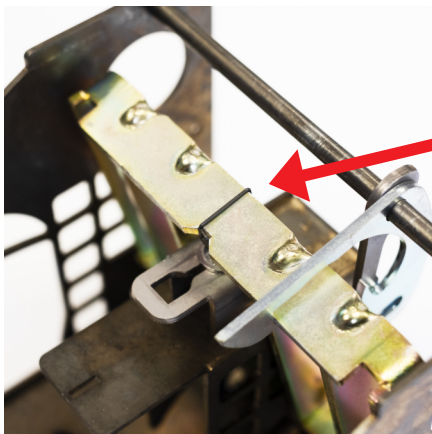

## Step 2

Place the square end of the clip into the trigger groove and push fully down until flush with the face of the kill bar.

## Step 3

Adjust the clip so that it is at right angles to the kill bar. The trigger should now be placed next to the raised part of the clip for accurate central setting.
