

## Measure for Shutters

Room Name: \_\_\_\_\_ Window: \_\_\_\_\_

### Shutters for windows are measured like this:

1. Measure A,B & C and give the narrowest dimension of the 3 to the closest 1/8".
2. Measure D,E & F and give the narrowest dimension of the 3 to the closest 1/8".
3. Then measure G & H and make sure these are exact or at least within 1/8" of each other. If they are not, contact us and tell us the difference before order.
4. Use our "Fractions Chart" to refer to the dimension to use.

### Note:

1. Windows more than 4' wide should be measured in 4 to 5 places for height as most windows are not perfectly straight or level.
2. Always check for "square", G & H, and make sure they are within 1/8" of each other. If they are not, contact us and tell us the difference before order.
4. Use our "Fractions Chart" to refer to the dimension to use/supply.

**D=** \_\_\_\_\_

**E=** \_\_\_\_\_

**F=** \_\_\_\_\_

**G=** \_\_\_\_\_

**H=** \_\_\_\_\_
