This information is intended for physicians and other licensed health care providers to use as a basis for determining whether or not to recommend these products to their patients. This medical and scientific information is not for use by consumers. The dietary supplement products offered by Designs for Sport are not intended for use by consumers as a means to cure, treat, prevent, diagnose, or mitigate any disease or other medical condition.

The body is 80% water and a 2-3% loss of fluids is enough to decrease performance.¹ Outdoor activity, exercise induced sweating, sauna use, low carbohydrate or ketogenic style eating paradigms are some of the ways that electrolyte imbalance can occur in active populations. Proper hydration does not occur with water alone!

Symptoms of an electrolyte imbalance include:

- Fatigue
- Dizziness
- Lethargy
- Irregular heart beat
- Muscle cramping, twitching
- Heavy legs
- Excessive thirst, urination (especially with diabetics)

The Designs for Sport Difference

Hydration Complex powder contains much more than electrolytes. Key ingredients support energy production, cardiovascular function, endurance and many of the nutrients lost during times of stress. Hydration Complex provides a full dose of vitamin C at 1734mg for immune support and collagen production.

KEY INGREDIENTS

Electrolytes:

Potassium, Sodium, Chloride, Magnesium

Taurine:

Supports healthy blood pressure and the flow of electrolytes in and out of the cell

D-Ribose:

Supports energy production and recovery

Vitamin C:

Assists collagen production, stress support, immune support

USES

- Replenish electrolytes lost from sweating
- Low carbohydrate diets
- Stress
- Diabetes
- Cardiovascular support
- Exercise endurance

HOW TO USE - CONSIDERATIONS:

Not recommended for individuals with sodium sensitive hypertension, those with a pacemaker or high blood sodium and potassium.

When following a lower carbohydrate diet your body will produce less insulin, this results in glycogen stores being depleted and the kidneys excreting sodium. Where sodium goes, water will follow so it is necessary to keep electrolytes balanced if following this eating paradigm.

Supplement Facts		
Serving Size 8 grams (approx. one scoop)		
Servings Per Container 30		
Amount Per Serving	% Daily Value	
Calories	10	
Total Carbohydrate	3 g	1%**
Vitamin C (as Ascorbic Acid, Calcium Ascorbate, Magnesium Ascorbate)	1734 mg	1927%
Magnesium (as Di-Magnesium Malate, Magnesium Ascorbate)	80 mg	19%
Chloride (as Sodium Chloride)	190 mg	8%
Sodium (as Sodium Chloride)	110 mg	5%
Potassium (as Potassium Bicarbonate, Potassium Aspartate)	170 mg	4%
D-Ribose	757 mg	*
Taurine	379 mg	*
Citrus Bioflavonoids	14 mg	*
Quercetin	13 mg	*
Rutin	7 mg	*

*Daily Value not established.
**Percent Daily Values are based on a 2,000 calorie diet.

Other Ingredients: Natural flavors, tapioca dextrin, silicon dioxide, certified organic stevia leaf extract (*Stevia rebaudiana*), citric acid.
