

GENERAL

Our camellia oil is pure oil extracted from the seeds of the camellia tree. The capacity of our bottles is 50ml.

PURPOSE

Camellia oil can be used both as corrosion protection and wood preservative. On the one hand, camellia oil is recommended for the care of the precious Calisso knives, as it is acid- and water-free, non-resinous, non-abrasive and very economical. It is particularly suitable for preserving the high-quality Calisso blades and guarantees excellent corrosion protection when applied very thinly. On the other hand, the low-viscosity oil is quickly absorbed by the wood and protects it against moisture and dirt. It is clear, non-discolouring and thus brings out the grain of the wood and protects the blade from moisture and acid. Furthermore, no residues are formed. It is therefore ideal for the care and protection of Calisso boards, handles and blades.

STORAGE

Keep the oil in a cool, dry place away from the sunlight. The opened bottle should be stored longer than 1 year.

The Chinese Camellia Oil

- Instructions for Use -

USAGE

To ensure the best possible corrosion protection for high-quality Calisso knives and boards, they must be oiled regularly with camellia oil. Apply a few drops onto a microfibre cloth or a cotton pad and gently apply on the blade. You can also apply it on knives with wooden handle. However, it is advisable to leave it on the knife for a while until the oil is completely absorbed into the wood. Before using the knife again, rinse it with clean water.

Repeat this process regularly to maintain a high level of protection.

WARNING

Due to the risk of self-ignition, oil-soaked cloth must be washed to remove residues. The oil is food safe, but is only suitable for corrosion and wood protection and is not suitable for consumption. The oil may cause an allergic reaction. You should wash your hands thoroughly after each use.
