9V battery adapter for Hasselblad EL series

Used to enable use of common 9V batteries in Hasselblad EL series motorized cameras.
Made from ABS with nickel plated contacts for maximum durability.

Shown with Hasselblad 500EL/M:

Battery not included with adapter. Compatible with Hasselblad 500EL, 500EL/M and 500ELX. Adapter and battery are inserted in orientation as per picture. There will be slight buckling in the battery cover due to cable connecting adapter and battery. This is normal for 9V adapters

Note: If you are using Hasselblad automatic flash system on 500ELX, metering is powered from flash unit. Flash circuit is not connected to body battery in any way. Electro motors in these bodies are made to handle much higher voltage.

Please use procedure from the manual when battery stops working in the middle of winding cycle.
