

# What people say

“In our pharmacy, we are aware of numerous medications that cause dry mouth as a side effect. We began recommending XyliMelts for relief and have had a great response. This is one of the best products to relieve dry mouth. It's very effective.”

Dmitry Lefelman, RPh  
Pharmacist

“I was waking up several times a night with a horrible dry mouth. These XyliMelts adhere to your tooth and gum area either in the top or bottom sides of your cheeks...I am sleeping comfortably again thanks to these... they work great!”

Sara, a XyliMelts user

“Sufficient evidence exists to support the use of Xylitol to reduce the risk of caries.”

## About OraCoat XyliMelts

OraCoat XyliMelts are fully-dissolving oral adhering discs whose active ingredients, Xylitol and cellulose gum, are slowly released in the mouth. They provide hours of discreet relief as the ingredients coat, moisturize, lubricate, soothe and stimulate saliva flow. Plus, XyliMelts adhere strongly to teeth and gums, so they can be safely used while sleeping, when dry mouth is worst. They can also be used with CPAP machines, OAT, and dentures. XyliMelts can be used while eating and drinking.

## About Xylitol, the key ingredient in XyliMelts

Xylitol is a natural food substance that coats the mouth to reduce plaque and tooth decay. A natural sweetener, it is comparable to sucrose in sweetness but contains fewer calories and fights cavities.

## Benefits of Xylitol (500mg):

**Increases saliva flow** which not only keeps your mouth moist, but helps maintain healthy teeth and reduces bad breath.

**Reduces plaque and tooth decay:** Frequent use of candy with sugar or starches to relieve dry mouth promotes tooth decay. Xylitol reduces plaque and tooth decay.

### Coats, moisturizes, and lubricates

Other benefits have been reported in published literature. Visit [www.xylitol.org](http://www.xylitol.org) for more information about xylitol.

## Adhering disc technology:

- The tan, dimpled side discreetly sticks to gums or teeth
- No effect on talking or appearance
- Stays in place; safe for use during sleep
- Allows use while sleeping when saliva flow is lowest for the most effective delivery of xylitol for caries control

## Xylitol delivery:

- Keeps mouth moister, longer
- Reduces plaque and tooth decay

## Directions for Use:

1. Place a disc at the gum line on the outside of a molar, upper or lower, with the white side touching your cheek and the tan adhesive side against your gums and/or teeth.

2. Use your tongue to push the disc to a comfortable spot. Once there, do not push with your finger or touch with your tongue for 10 seconds, as this will disrupt adhesion which grows stronger over time.

**While sleeping:** Use two (2) discs, placing one on each side of the mouth. Some people find one disc at a time is enough.

**Daytime:** Use as needed.
