

Hoodliner Installation Guide

HushMat Hoodliner is formulated to insulate/reflect heat away from your hood. The Hoodliner kit contains 12 Square Feet of approximately 1/8th inch thick 0.6 pounds per square foot heat insulating material. This kit is designed to treat a full size or truck hood. HushMat Hoodliner performs up to 550 degrees F (288 C). Hoodliner is paintable.

Start by removing the fabric mat from underneath your hood. The fabric mat is typically fastened with push pins and can be reinstalled.

Remove any dust or dirt from the surface of the hood with a dry cloth. With HushMat Hoodliner you don't have to use environmentally unfriendly acetone or alcohol to clean the surface.

Apply each sheet of HushMat Ultra directly on the metal surface and use light hand pressure to allow material to form into uneven surfaces or channels. If the hood has deep draw areas you can cut cross patterns with a razor knife to allow the material to form into the bottom of the draw. Reinstall the fabric/fiber mat.

HushMat is manufactured in the United States of America and has been for over three decades. Easy to install and performs for the life of your vehicle. Tag photos or video of your install with #HushMatUSA
