Difference between oral and injectable: oral metabolizes

rapidly in the liver via methylation causing a dangerous spike in liver enzymes. Due to the rapid metabolism oral dbol converts at an astounding rate. Oestrogen and E2 skyrocket leaving an athlete at risk for gynecomastia. Injectable releases into the limbic system first which means minimal damage to the liver and a less aggressive spike in enzymes. Furthermore, due to the slower release the conversion of dbol is dramatically decreased. This means less bloat and less risk for gynecomastia.
