Certification

Safety Approvals:	UKCA CE FCC (Q1 2023 onwards)
-------------------	-------------------------------------

Measurements

Unit:	260mm(W) x 148mm(H) x 100mm(D)
Weight (unboxed):	1.43Kg
Packaging:	320mm(W) x 210mm(H) x 190mm(D)
Weight (boxed):	2.17Kg

Product Features & Tech - iOS & Android App

[We are currently Beta testing a new app - release due Q1 2023]

BoomBocs speakers currently utilise UNDOK, an app to provide the most complete, versatile and easy-to-use controller for next generation BoomBocs smart speakers. It offers comprehensive remote control functionality for BoomBocs modules with an iOS or Android smart device, downloadable from the relevant stores.

The app enables users to navigate between audio modes, browse content and control playback volume on standalone BoomBocs systems. The user may also allocate presets for streaming services like Spotify and Deezer, as well as radio stations.

For personalisation, the user is able to rename their device and change the app's theme between dark and light.

The UNDOK app gives you control over all the listening modes available on the connected BoomBocs smart device. Modes available include:

- Spotify
- Amazon Music
- Deezer
- Internet Radio
- USB Playback Device
- Auxiliary Input

The app syncs automatically with the BoomBocs speaker so you can switch between the speaker's controls and those of the app.
