

TX9000

Twin-chamber ultrafiltration ensures maximum protection and refreshing taste

Cold water line enters the top of the cartridge directing water flow down through intake channel into the filtration chambers.

Ultrafiltration Membrane Chamber removes virtually all waterborne particulates down to the infinitesimal size of 0.5 micron (1/50,000th of an inch), including lead, asbestos, fibers, and virulent parasitic cysts not killed by chlorination.

Water flow through Granular
Activated Carbon chambers
purges out organic chemicals,
including chlorine, VOCs and
THMs.
